Word help

Tier	Word	Meaning	Example
Tier 2	feature	A part or property we can describe.	A nerve cell has a long extension.
Tier 2	function	The job something does.	A nerve cell carries signals.
Tier 2	evidence	Information used to support a claim.	A labelled drawing can support a model explanation.
Tier 2	compare	Describe what is alike and what differs.	Both routes include division.
Tier 3	mitosis	Division of a nucleus to produce two nuclei with matching inherited information.	Cell splitting after mitosis makes two cells.
Tier 3	stem cell	A cell that can divide and give rise to specialised cell types.	Some adult stem cells make replacement blood cells.
Tier 3	differentiation	The process in which a cell becomes specialised for a particular job.	A descendant develops features of a muscle cell.
Tier 3	meristem	A plant region with cells that divide to make new cells.	A root tip contains a meristem.
Tier 3	elongation	An increase in the length of a cell.	New plant cells can become longer.
Tier 3	specialised cell	A cell with features suited to a particular job.	A root hair cell has an extension that provides a large surface for absorption.

Say it, point to the drawing, use it in a short explanation, then check the meaning.

Sentence stem: The cell has ___. This helps it to ___ because ___.
