Guidance and staff card

Prepared 3 November 2026

Invite a response. Give thinking time. The learner may pass. Offer private answers and the usual response mode.

Return to learning: use the individual pause plan, give space, then return to the last secure step and one structured choice. Correct privately.

Use soft instrumental music for transitions if the class plan says so.

Code	Meaning
VF	Verbal feedback given here
WS	Worked with support
I	Independent
NS + …	Next step one specific thing
E	Evidence captured on the evidence app
R	Responded loop closed after a pupil response and adult engagement
//	Self-edit point
?	Read this back to me

At check-out, record E for today's lesson against each pupil's target on the evidence app

Use observed evidence and record the support given. An edit is in the same colour, on the same page. Written feedback is used for extended writing when it adds value.

Codes follow the verified feedback policy, Issue 1. A button, saved answer or completed stage does not award a code.

At check-out, record E for … against the pupil's target.

Feedback codes VF · WS · I · NS + … · E · R · // · ?
Give one feedback code. My response is the pupil’s improvement to the work.
Adult checks the response and ticks it, or writes R (Pupil responded to feedback).

Made by Matt

Science · LAUNCH · Autumn 2 · Week 3 · SCI-LAUNCH-A2-W03-L3

Teacher and cover plan

I can revise a written judgement about a fictional stem-cell case and explain why my edits improve it.

At check-out, record E for … against the pupil's target.

Total: 40 minutes. Start from the actual responses. Keep the paragraph repair, a conditional judgement, review and the exit.

Week arc: Discover: stem-cell ethics. Use: weigh a stem-cell case. Master: a reasoned written judgement.

Kit: large prepared case cards, desk mat and labelled references. Build in quiet resets during shared work, independent work and review.

Teaching sequence

Stage	Minutes	Teaching and check
Arrival	5	Q1 checks picture access. Use the picture labels before asking about the results. Offer enlarged or tactile paper shapes; accept pointing before speaking.
Starter	3	Ask the original three retrieval questions in order. Invite a response and allow a pass. Reveal answers separately and revisit the success criteria.
I do	3	Read the fictional result. Model a narrow claim and point to the missing harm results. Make clear the case is made up for this lesson.
We do	7	Hear one reason before checking. Use the optional participation prompt and check the effect of any agreed change.
I do	2	Trace how each new check could affect the judgement. Ask what it would mean if both groups improved similarly.
We do	5	Hear a reason for each edit. Check all three revisions together, then ask how serious harms might change the recommendation in the fresh case.
You do	8	Hear the revised judgement and one reason for an edit in the learner’s usual mode. Record actual independence and support.
Review and improve	4	Give one specific feedback point. Hear the edit or explanation and use it to choose the next prompt.
Exit ticket	3	Hear every response through the usual mode. Use it to change the next example or prompt. Keep one response and state the support actually used.

Feedback codes VF · WS · I · NS + … · E · R · // · ?
Give one feedback code. My response is the pupil's improvement to the work.
Adult checks the response and ticks it, or writes R (Pupil responded to feedback).

Exit pupil voice
What helped you most today, or what would you change next time?
Accept a pointed, spoken, signed, drawn, written or chosen response. A pupil may pass.

Made by Matt

P17 · SLT planning and evaluation

Planned adaptations

Need	Planned adaptation
Cognition and learning	Use one result and one visible label, then fade one cue.
Communication and interaction	Rehearse in pairs or respond by pointing, signing or exact scribing.
Regulation	Use the individual pause plan and return to one model choice.
Sensory and physical	Offer enlarged cards and adult-directed handling.
Language access	Pre-teach benefit, risk and evidence with a picture.

If behind

Use one comparison in the argument model. Keep a qualified judgement, review and exit. Record any change to coverage.

Where catch-up is embedded

Use the picture at Arrival and the static references beside each model. The catch-up sheet replaces the first step after absence or an access barrier.

Staff evaluation

Prompt	Record after teaching
Delivery	Actual change and reason
Criteria	Response and support used
Adaptation	Change and effect on a fresh response
Coverage	Remaining teaching move
Evidence	Location on the evidence app and lesson code

Made by Matt

P18 · Individual target opportunities

Use each learner’s existing targets. Leave pupil codes and target fields blank.

Opportunity	Lesson evidence and adult response
Cognition and learning	Match an evidence card to a claim, then fade the cue.
Communication	Give a reasoned judgement using the agreed response mode.
Regulation	Request an adjustment and return to one step. Check the effect.
Sensory or physical access	Direct a choice or place a card with usual equipment. Record access support separately.
Language access	Use one precise science term in a fresh response.

Adult deployment and responsive feedback

Agree who leads the model and who checks access. Hear the learner’s reason privately if needed. Wait, point, rephrase and then offer a limited choice. Check a fresh case after prompting.

For the optional participation prompt, hear the learner, agree a possible change, explain any limit and check whether it helped.

Made by Matt

Science · LAUNCH · Autumn 2 · Week 3 · SCI-LAUNCH-A2-W03-L3

First lesson back · once-only read

Before the lesson · scan the books

Scan for five minutes. Find where teaching stopped and what responses were actually made. Look for access barriers and useful science evidence.

Existing NS + is history

Do not chase, back-mark or retrospectively close earlier feedback. Begin fresh feedback from this lesson.

Ask the cover teacher and TAs

Ask what was taught, which models were used, what changed for individuals and which responses were heard.

Check the roll

Compare attendance with the available evidence. New arrivals start from what they show here; absence creates no automatic deficit label.

Arrival read-off · decide by about minute eight

Q1 checks picture access. Use the next answers to check the reported result, the gap and the further check. If the benefit and the safety gap are confused, return to the case cards.

After last lesson · one read, once

Read each exit against its criterion and the support used. Choose the next route from the least secure dependency. Teach next; do not reopen historical feedback.

Made by Matt

Preparation and practical safety

This is a model lesson. It uses prepared cards and drawings. It does not involve culturing cells, collecting tissue, handling blood, treatment decisions or a claimed core practical.

Check large cards and the desk area. Keep loose cards on a mat and pick up fallen items. Provide seated or adult-directed handling where needed. Follow the local risk assessment and individual plans.

Test the offline display, keyboard controls, print choices and reset actions. Keep a static reference available. Use each learner’s usual access equipment.

Destination link: explaining cell structure and interpreting scientific claims supports further biology study and work in laboratory support and biomedical science.

Made by Matt

Teacher answers and topic guidance

Accept equivalent science in the usual response mode. Keep answers hidden during independent attempts.

Starter

1. Differentiation.
2. Two daughter cells with matching chromosome sets.
3. From higher to lower concentration overall.

Sort the case

Better movement is a possible benefit. Possible harmful effects are a risk. Recording harms is a further evidence check.

Repaired paragraph

The report describes improved movement in the group. Harm results are missing. Consider further research with safeguards. Check harms and use a suitable comparison before recommending routine use.

Fresh check

Serious harms with a small movement gain weaken support. Learners can qualify or withdraw support if they connect their judgement to the evidence.

Arrival Supported

1. The first card is Movement.
2. Movement improved in the fictional study.
3. The harm result.
4. Yes.

Arrival Independent

1. Harms.
2. Improved movement in the group studied.
3. Whether participants experienced harm.
4. Record possible harmful effects.

Arrival Aspire

1. The third card, Further check.
2. Possible improvement in movement in this group.
3. Harm data were not reported.
4. Compare movement and harms across matched groups.

Arrival Choice

1. Movement.
2. Movement improved.
3. Harms.
4. Harmful effects.

Exit Supported

1. In the group studied.
2. Possible harmful effects.

Exit Independent

1. Movement improved in the group studied. The report gives no harm results.
2. Consider further research provided it compares movement and records harms.

Exit Aspire

1. Serious harms or a similar gain in a suitable comparison group.
2. Naming the group narrows the claim to the evidence, or naming the gap explains why safety is uncertain.

Exit Choice

1. Harms are uncertain.
2. Compare benefits and harms first.

Made by Matt

Mark scheme Supported

Use the actual response and support given. These question tariffs are not participation scores. Award each distinct science point once, up to the stated maximum.

1. Replace “Everyone moves better” with a claim about the group studied.

Movement improved in the group studied.

Maximum 1 marks. Accept equivalent valid wording or a clear model demonstration.

2. Finish the sentence: The report does not tell us whether … . Explain why this matters.

It does not tell us whether harms occurred. Safety is uncertain.

Maximum 2 marks. Accept equivalent valid wording or a clear model demonstration.

3. Write or dictate one cautious recommendation with a reason.

Consider further research because movement improved. Check harms before recommending use.

Maximum 2 marks. Accept equivalent valid wording or a clear model demonstration.

Made by Matt

Mark scheme Independent

Use the actual response and support given. These question tariffs are not participation scores. Award each distinct science point once, up to the stated maximum.

1. Rewrite “It works for everyone and is safe” as two evidence-based sentences.

Movement improved in the group. The report gives no harm results, so safety is uncertain.

Maximum 3 marks. Accept equivalent valid wording or a clear model demonstration.

2. Explain how a suitable comparison can test the benefit claim.

A suitable comparison can test whether the same improvement occurs without the approach.

Maximum 2 marks. Accept equivalent valid wording or a clear model demonstration.

3. Write a judgement that weighs both outcomes and requests a further check.

Consider further research because movement improved, provided it measures harms and compares the movement results before any decision about use.

Maximum 3 marks. Accept equivalent valid wording or a clear model demonstration.

Made by Matt

Mark scheme Aspire

Use the actual response and support given. These question tariffs are not participation scores. Award each distinct science point once, up to the stated maximum.

1. Repair the claim that the approach caused better movement. Explain the limitation.

The group showed improved movement. A comparison is needed to test whether the approach caused it.

Maximum 2 marks. Accept equivalent valid wording or a clear model demonstration.

2. Explain how serious harms in a second study would change your judgement.

Serious harms could outweigh a small movement gain and weaken support. The judgement should change when the evidence changes.

Maximum 2 marks. Accept equivalent valid wording or a clear model demonstration.

3. Write a qualified judgement and explain which edit made it stronger.

Consider safeguarded further research only if it addresses the risk gap. Limiting the claim to this group and adding harms make the judgement fit the report.

Maximum 3 marks. Accept equivalent valid wording or a clear model demonstration.

Made by Matt

Mark scheme Choice

Use the actual response and support given. These question tariffs are not participation scores. Award each distinct science point once, up to the stated maximum.

1. Choose a repair: “Movement improved in this group” or “Everyone benefits.” Explain.

Movement improved in this group. The evidence describes only that group.

Maximum 2 marks. Accept equivalent valid wording or a clear model demonstration.

2. Choose a repair: “Harms were not reported” or “No harms happened.” Explain.

Harms were not reported. The report cannot tell us whether any occurred.

Maximum 2 marks. Accept equivalent valid wording or a clear model demonstration.

3. Choose a repair: “Research with safeguards” or “Use now.” Explain.

Research with safeguards leaves room to record harms and compare the benefit before recommending use.

Maximum 2 marks. Accept equivalent valid wording or a clear model demonstration.

Made by Matt

Science staff guidance

Invite a response, give thinking time and allow a pass. Separate access support from help with the science. Use pointing, sign, drawing, exact scribing or adult-directed handling.

Check the reported benefit and the missing harm results separately. If a claim goes beyond the observation, ask the learner to name what was measured and one further check.

Made by Matt

Science · LAUNCH · Autumn 2 · Week 3 · SCI-LAUNCH-A2-W03-L3

TA Brief

I can revise a written judgement about a fictional stem-cell case and explain why my edits improve it.

At check-out, record E for … against the pupil's target.

The fictional report gives a movement result and leaves harm results out.

Hear one reason during the sort and ask the learner to explain a repair in the weak paragraph. Check that the learner distinguishes an unreported harm result from a report of no harm.

Wait, point and rephrase before giving a content cue. Record actual I · S · C beside the task. Use the agreed quiet pause and return to one step.

Feedback codes VF · WS · I · NS + … · E · R · // · ?
Give one feedback code. My response is the pupil’s improvement to the work.
Adult checks the response and ticks it, or writes R (Pupil responded to feedback).

Exit pupil voice
What helped you most today, or what would you change next time?
Accept a pointed, spoken, signed, drawn, written or chosen response. A pupil may pass.
