Guidance and staff card

Prepared 3 November 2026

Invite a response. Give thinking time. The learner may pass. Offer private answers and the usual response mode.

Return to learning: use the individual pause plan, give space, then return to the last secure step and one structured choice. Correct privately.

Use soft instrumental music for transitions if the class plan says so.

Code	Meaning
VF	Verbal feedback given here
WS	Worked with support
I	Independent
NS + …	Next step one specific thing
E	Evidence captured on the evidence app
R	Responded loop closed after a pupil response and adult engagement
//	Self-edit point
?	Read this back to me

At check-out, record E for today's lesson against each pupil's target on the evidence app

Use observed evidence and record the support given. An edit is in the same colour, on the same page. Written feedback is used for extended writing when it adds value.

Codes follow the verified feedback policy, Issue 1. A button, saved answer or completed stage does not award a code.

At check-out, record E for … against the pupil's target.

Feedback codes VF · WS · I · NS + … · E · R · // · ?
Give one feedback code. My response is the pupil’s improvement to the work.
Adult checks the response and ticks it, or writes R (Pupil responded to feedback).

Science · LAUNCH · Autumn 2 · Week 4 · SCI-LAUNCH-A2-W04-L2

Teacher and cover plan

I can zoom from a chromosome to a gene and a base, and explain how the three levels fit together.

At check-out, record E for … against the pupil's target.

Total: 40 minutes. Start from the actual responses. Keep one zoom, one part–whole explanation, review and exit.

Week arc: Discover: DNA, genes and chromosomes. Use: from chromosome to gene to base. Master: match DNA structures to their functions.

Kit: large prepared DNA model cards, desk mat and labelled references. Build in quiet resets during shared work, independent work and review.

Teaching sequence

Stage	Minutes	Teaching and check
Arrival	5	Q1 checks picture access. Use the picture labels before asking about the results. Offer enlarged or tactile paper shapes; accept pointing before speaking.
Starter	3	Ask the original three retrieval questions in order. Invite a response and allow a pass. Reveal answers separately and revisit the success criteria.
I do	3	Reveal one zoom level at a time. Name the package, the section and the base. Tell pupils that the model is a sketch and does not show scale.
We do	7	Hear one reason before checking. Use the optional participation prompt and check the effect of any agreed change.
I do	2	Trace the nesting. Distinguish the physical package, the region in DNA and the single unit. Use cards or a raised line model where needed.
We do	5	Collect simultaneous responses. If pupils confuse the section and the base, trace the bracket and the letter again. Use the fresh check to test the distinction.
You do	8	Hear a correct label and a reason in the learner’s usual mode. Record actual independence and support.
Review and improve	4	Give one specific feedback point. Hear the edit or explanation and use it to choose the next prompt.
Exit ticket	3	Hear every response through the usual mode. Use it to change the next example or prompt. Keep one response and state the support actually used.

Feedback codes VF · WS · I · NS + … · E · R · // · ?
Give one feedback code. My response is the pupil's improvement to the work.
Adult checks the response and ticks it, or writes R (Pupil responded to feedback).

Exit pupil voice
What helped you most today, or what would you change next time?
Accept a pointed, spoken, signed, drawn, written or chosen response. A pupil may pass.

Made by Matt

P17 · SLT planning and evaluation

Planned adaptations

Need	Planned adaptation
Cognition and learning	Use one feature and one visible label, then fade one cue.
Communication and interaction	Rehearse in pairs or respond by pointing, signing or exact scribing.
Regulation	Use the individual pause plan and return to one model choice.
Sensory and physical	Offer enlarged cards and adult-directed handling.
Language access	Pre-teach chromosome, gene and base with a picture.

If behind

Use the three-level zoom. Keep one independent explanation, review and exit. Record any change to coverage.

Where catch-up is embedded

Use the picture at Arrival and the static references beside each model. The catch-up sheet replaces the first step after absence or an access barrier.

Staff evaluation

Prompt	Record after teaching
Delivery	Actual change and reason
Criteria	Response and support used
Adaptation	Change and effect on a fresh response
Coverage	Remaining teaching move
Evidence	Location on the evidence app and lesson code

P18 · Individual target opportunities

Use each learner’s existing targets. Leave pupil codes and target fields blank.

Opportunity	Lesson evidence and adult response
Cognition and learning	Match a label to a DNA feature, then fade the cue.
Communication	Explain one link in the model using the agreed response mode.
Regulation	Request an adjustment and return to one step. Check the effect.
Sensory or physical access	Direct a choice or place a card with usual equipment. Record access support separately.
Language access	Use one precise science term in a fresh response.

Adult deployment and responsive feedback

Agree who leads the model and who checks access. Hear the learner’s reason privately if needed. Wait, point, rephrase and then offer a limited choice. Check a fresh case after prompting.

For the optional participation prompt, hear the learner, agree a possible change, explain any limit and check whether it helped.

Made by Matt

First lesson back · once-only read

Before the lesson · scan the books

Scan for five minutes. Find where teaching stopped and what responses were actually made. Look for access barriers and useful science evidence.

Existing NS + is history

Do not chase, back-mark or retrospectively close earlier feedback. Begin fresh feedback from this lesson.

Ask the cover teacher and TAs

Ask what was taught, which models were used, what changed for individuals and which responses were heard.

Check the roll

Compare attendance with the available evidence. New arrivals start from what they show here; absence creates no automatic deficit label.

Arrival read-off · decide by about minute eight

Q1 checks picture access. Use the next answers to check the bracket, the base and the part–whole link. If the labels are confused, return to the three-level model.

After last lesson · one read, once

Read each exit against its criterion and the support used. Choose the next route from the least secure dependency. Teach next; do not reopen historical feedback.

Made by Matt

Preparation and practical safety

This is a model lesson. It uses prepared cards and drawings. It does not involve culturing cells, collecting tissue, handling blood, treatment decisions or a claimed core practical.

Check large cards and the desk area. Keep loose cards on a mat and pick up fallen items. Provide seated or adult-directed handling where needed. Follow the local risk assessment and individual plans.

Test the offline display, keyboard controls, print choices and reset actions. Keep a static reference available. Use each learner’s usual access equipment.

Destination link: explaining cell structure and interpreting scientific claims supports further biology study and work in laboratory support and biomedical science.

Made by Matt

Teacher answers and topic guidance

Accept equivalent science in the usual response mode.

Starter

1. Evidence can test the possible benefit and check for harm.
2. Chromosomes. Each new nucleus receives a matching set.
3. In the nucleus.

Zoom

A chromosome contains a long DNA molecule packaged with proteins. The bracket marks a region of DNA, a gene. A represents a single base, adenine.

Fresh check

Move the gene label to the bracketed DNA section and label the letter A as a base. Many bases make up the sequence in a gene.

Arrival Supported

1. Chromosome.
2. A gene.
3. A.
4. No. A gene contains a sequence of bases.

Arrival Independent

1. Base.
2. The chromosome.
3. The section that represents a gene.
4. A base is one unit in the DNA sequence of the gene.

Arrival Aspire

1. The middle drawing.
2. The gene is one section of the DNA in a chromosome.
3. It represents one DNA base, adenine.
4. Any valid limit, such as size, the full base sequence or the DNA packaging proteins.

Arrival Choice

1. Chromosome.
2. Gene.
3. A.
4. Chromosome → gene → base.

Exit Supported

1. Gene.
2. A, C, G or T.

Exit Independent

1. A gene is a section of the DNA packaged in the chromosome.
2. It is one unit in the gene’s DNA sequence.

Exit Aspire

1. A gene is a section of DNA. A chromosome contains a long packaged DNA molecule.
2. It does not show true scale, all the bases or the packaging proteins.

Exit Choice

1. Chromosome.
2. Gene.

Made by Matt

Mark scheme Supported

Use the actual response and support given. These question tariffs are not participation scores. Award each distinct science point once, up to the stated maximum.

1. Label the three zoom levels: chromosome, gene and base.

Chromosome, gene, base.

Maximum 3 marks. Accept equivalent valid wording or a clear model demonstration.

2. Complete: A gene is a section of ___.

DNA.

Maximum 1 marks. Accept equivalent valid wording or a clear model demonstration.

3. Point to one base in the model and explain how it fits in the gene.

A is one base in the gene’s DNA sequence.

Maximum 2 marks. Accept equivalent valid wording or a clear model demonstration.

Made by Matt

Mark scheme Independent

Use the actual response and support given. These question tariffs are not participation scores. Award each distinct science point once, up to the stated maximum.

1. Explain what the gene bracket marks in the DNA drawing.

It marks a section of DNA. The gene has a sequence of bases.

Maximum 2 marks. Accept equivalent valid wording or a clear model demonstration.

2. Explain why the chromosome drawing shows a larger structure than the gene drawing.

A chromosome contains a long DNA molecule packaged with proteins. A gene is one section of the DNA.

Maximum 2 marks. Accept equivalent valid wording or a clear model demonstration.

3. Correct “A base is a small chromosome”. Explain why.

A base is a unit of DNA. A gene has many bases, and a chromosome contains packaged DNA.

Maximum 3 marks. Accept equivalent valid wording or a clear model demonstration.

Made by Matt

Mark scheme Aspire

Use the actual response and support given. These question tariffs are not participation scores. Award each distinct science point once, up to the stated maximum.

1. Explain what is lost if a model labels an entire chromosome as a gene.

The label loses the distinction between packaged DNA and one region. A chromosome contains many genes and other DNA.

Maximum 2 marks. Accept equivalent valid wording or a clear model demonstration.

2. Explain how the base sequence relates to a protein instruction in a protein-coding gene.

The gene is a DNA section whose base sequence provides instructions for a protein.

Maximum 2 marks. Accept equivalent valid wording or a clear model demonstration.

3. State one limit of the zoom model and make a justified improvement.

For example, the sketch leaves out proteins. Add a label to show that the long DNA molecule is packaged with proteins.

Maximum 3 marks. Accept equivalent valid wording or a clear model demonstration.

Made by Matt

Mark scheme Choice

Use the actual response and support given. These question tariffs are not participation scores. Award each distinct science point once, up to the stated maximum.

1. Which is packaged DNA: chromosome or base? Give a reason.

Chromosome. It contains a long DNA molecule packaged with proteins.

Maximum 2 marks. Accept equivalent valid wording or a clear model demonstration.

2. Which marks a section of DNA: gene or genome? Give a reason.

Gene. The genome is the full DNA set.

Maximum 2 marks. Accept equivalent valid wording or a clear model demonstration.

3. Which shows one base: A or the whole gene? Give a reason.

A. A gene contains a sequence of many bases.

Maximum 2 marks. Accept equivalent valid wording or a clear model demonstration.

Made by Matt

Science staff guidance

Invite a response, give thinking time and allow a pass. Separate access support from help with the science. Use pointing, sign, drawing, exact scribing or adult-directed handling.

Check the chromosome, gene and base separately. Ask what the model leaves out.

Made by Matt

Science · LAUNCH · Autumn 2 · Week 4 · SCI-LAUNCH-A2-W04-L2

TA Brief

I can zoom from a chromosome to a gene and a base, and explain how the three levels fit together.

At check-out, record E for … against the pupil's target.

A chromosome contains packaged DNA. A gene is a region of that DNA, with a sequence of bases.

At the zoom, hear one reason for the label. Check that the learner distinguishes a whole package, a region and one unit.

Wait, point and rephrase before giving a content cue. Record actual I · S · C beside the task. Use the agreed quiet pause and return to one step.

Feedback codes VF · WS · I · NS + … · E · R · // · ?
Give one feedback code. My response is the pupil's improvement to the work.
Adult checks the response and ticks it, or writes R (Pupil responded to feedback).

Exit pupil voice
What helped you most today, or what would you change next time?
