

The museum has three doubtful labels

Learning intention

Use evidence to correct museum labels about fossils, soils and light.

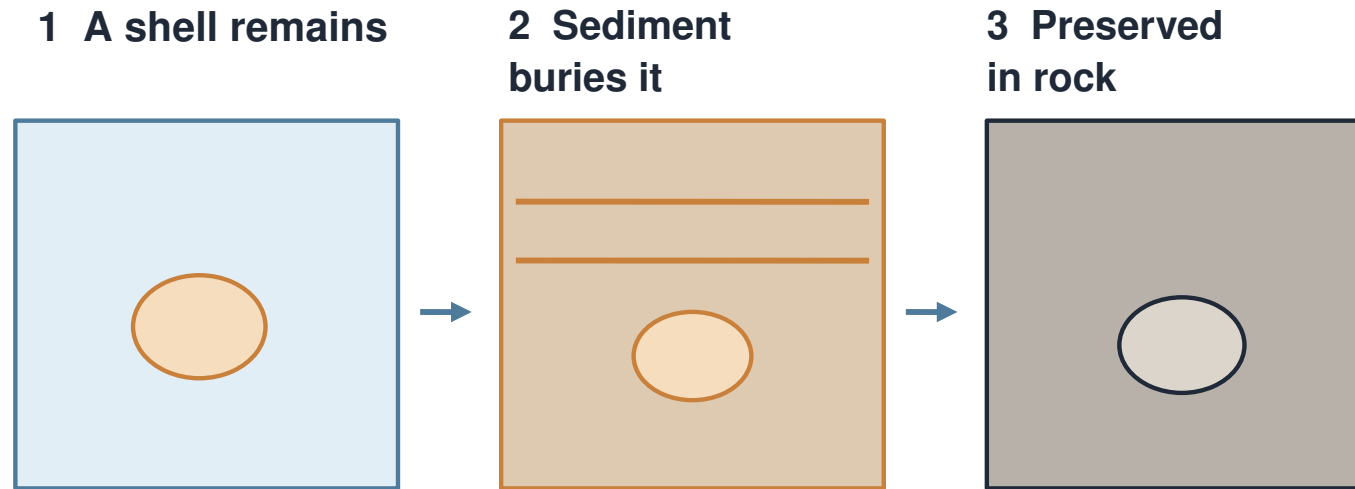

Become the evidence editor.

Keep a claim only if the clues support it.

Retrieve one idea from each strand

1. What can a fossil be evidence of?
2. Name something found in soil.
3. Do eyes receive or make viewing light?

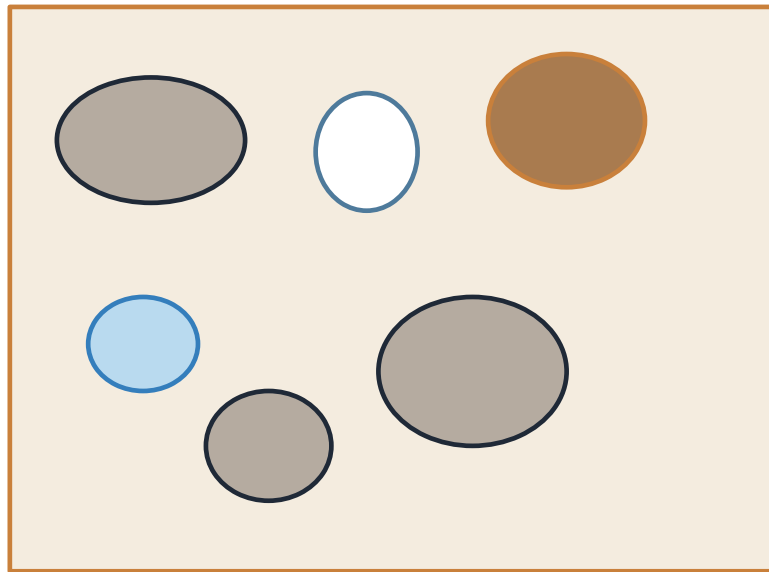

I separate a fossil from a model

Much time passes. Most remains do not become fossils.

A fossil preserves ancient evidence. Today's imprint can model a shape. The model does not become ancient.

I repair the soil label

**Mineral particles
from rocks**

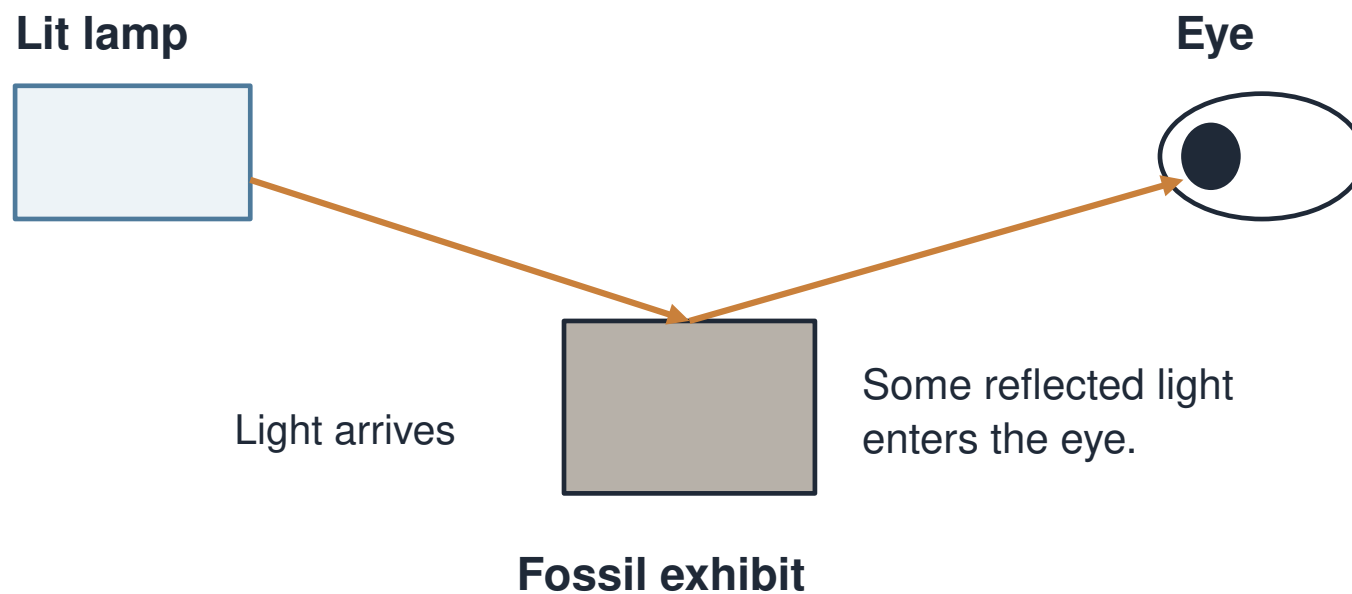

Organic matter:
remains of living things

Spaces can hold
air and water.

Not to scale. Living organisms can also occur in soil.

Mineral pieces are one part. Organic matter is another. Spaces can contain air or water.

I follow the museum light

A plain fossil is a reflector, not a light source.

Start at the lamp. Follow reflected light into the eye.

Curators compare A and B

Which is ancient evidence? Which is a recent model? Explain using the card history.

Exhibit	Given history
A	Preserved shell in ancient rock
B	Imprint made in clay today

Supplied fictional exhibit records

Repair the two-word traps

“Soil is only rock.”

“Eyes make viewing light.”

Change the smallest useful phrase.

Which label can stay?

Choose the claim with evidence.

- A** Today's clay imprint is an ancient fossil.
- B** The fossil can be seen when reflected light reaches the eye.
- C** Soil contains no organic material.

Choose your science route

Correct short labels.

Write a museum guide.

Review the limits of evidence.

Make your own evidence record

Use the shared evidence.

Explain one choice.

Check a label or number.

Check what the evidence can show

Point to the clue you used.

Remove an unsupported claim.

Lundy loop: improve the shared account

Choose how to share.

Hear one evidence-based challenge.

Improve or defend one idea.

Which word did our evidence make us change?

Keep the useful change

What changed in our account?

Which evidence helped?

Three final checks

E1. What does a fossil preserve?

E2. Name one non-mineral part of soil.

E3. What must enter the eye to see the exhibit?
