

Make a guide another pupil can use

Learning intention

Identify roots, stem, leaves and flower from plant structures, while distinguishing hidden from absent.

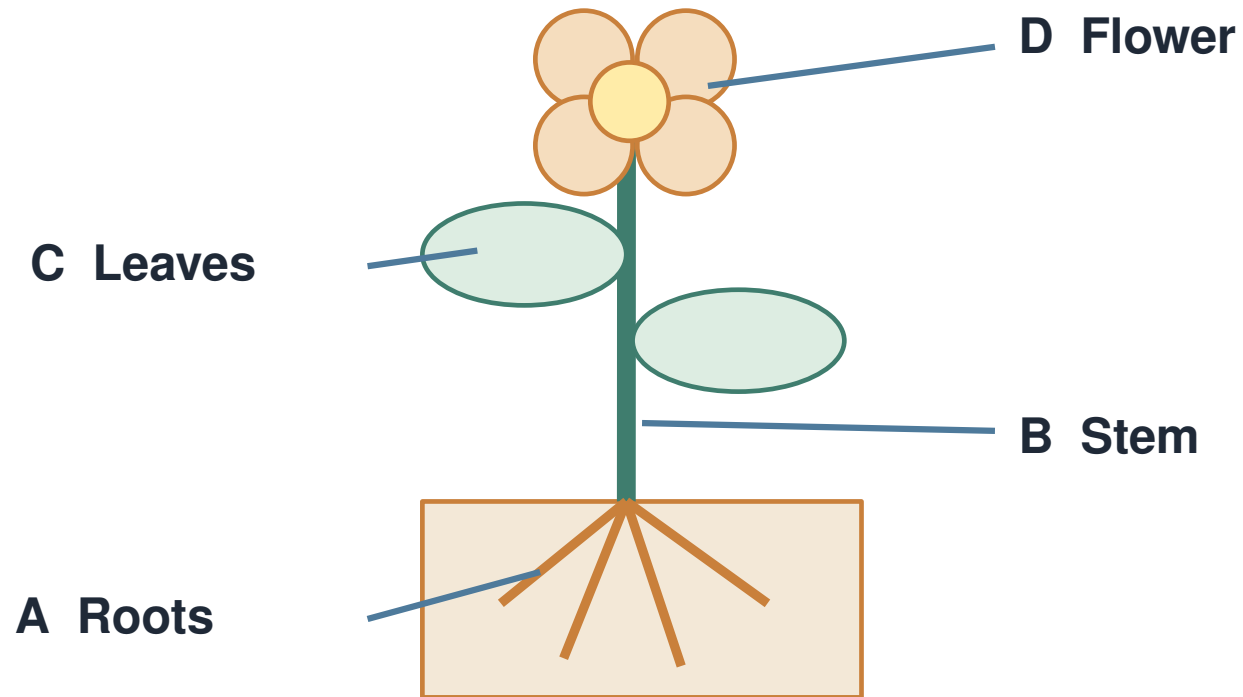

Identify the part.

Point to your evidence.

Notice the structure

1. Is a plant living?
2. Name one plant part you know.
3. Can a container hide part of it?

I identify the part, then label it

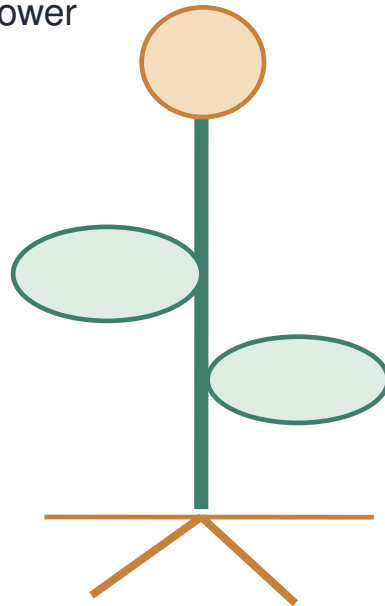

Simplified flowering plant; shapes and sizes vary.

Roots branch below the soil. Stem connects the parts. Leaves and flower attach above.

I keep names when shapes change

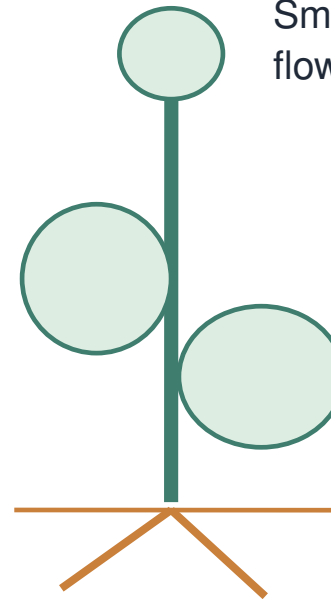

Different shapes can have the same part name.

Flower

Narrow leaves

Small green
flower

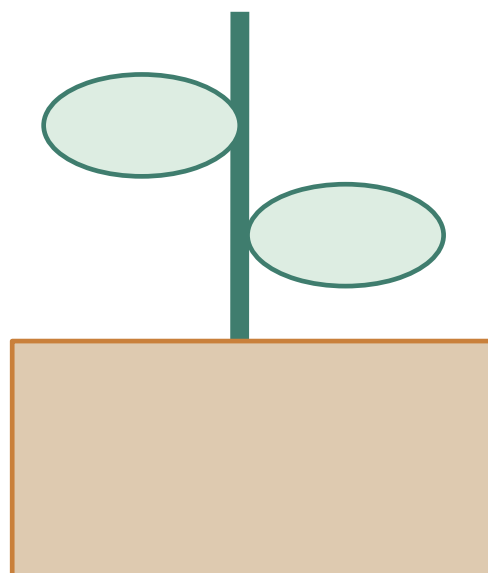

Broad leaves

Leaves can have different shapes. A flower need not be large or bright.

I separate seen from hidden

Observation: no flower is visible today.

**Leaves and stem
are visible.**

Roots are hidden
inside the pot.

This view cannot tell us whether it flowers at another time.

I can see the stem and leaves. The pot hides the roots. No flower is visible today.

Atlas partners: point, name, check

Use records A–D. One partner names a part. The other checks its location.

Code	Clue
A	Branches below soil
B	Upright connecting part
C	Flat parts attached to B
D	Petalled structure here

Simplified atlas clues; not all plants look identical

The observation editor

“I see no roots.”

“This plant has no roots.”

Which claim fits E?

A plant has small green flowers. What follows?

Use structure, not colour alone.

- A** All its green parts must be leaves.
- B** It can still have roots, stem, leaves and flowers.
- C** Its hidden roots do not exist.

Choose your science route

Complete the part key.

Draw a labelled atlas plant.

Review an unfamiliar view.

Make your own evidence record

Use the shared evidence.

Explain one choice.

Check a label or number.

Check what the evidence can show

Point to the clue you used.

Remove an unsupported claim.

Lundy loop: improve the shared account

Choose how to share.

Hear one evidence-based challenge.

Improve or defend one idea.

Which label or observation became more precise?

Keep the useful change

What changed in our account?

Which evidence helped?

Three final checks

- E1. Name the branching part usually below soil.
- E2. Name the part that bears leaves.
- E3. Does no visible flower prove a plant never flowers?
