

Which plant needs a better care plan?

Learning intention

Identify requirements for healthy plant growth and use height plus leaf evidence to evaluate a care claim.

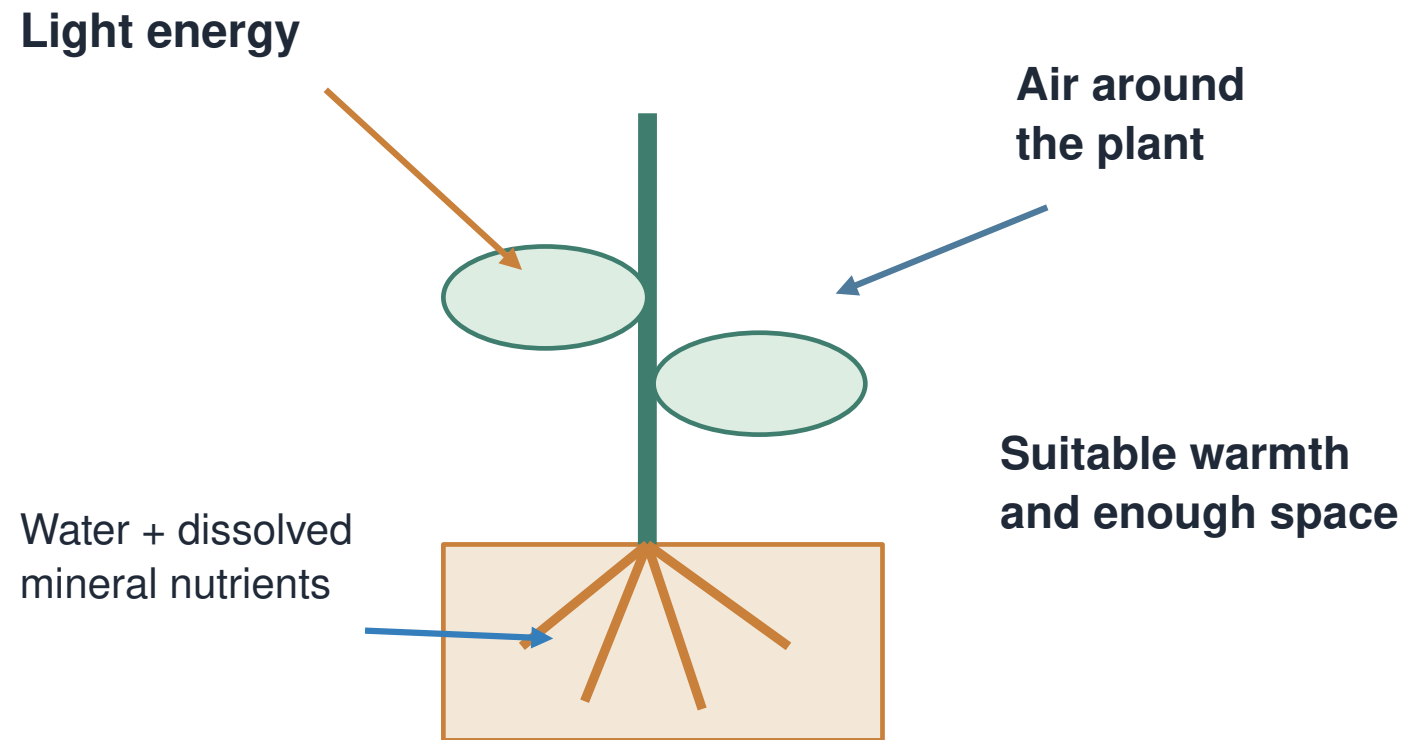

Height is one clue.

Look for a second clue.

Retrieve the inputs

1. Where does water enter?
2. What do green leaves need to make sugars?
3. Are minerals the same as ready-made sugar?

I check the whole set of needs

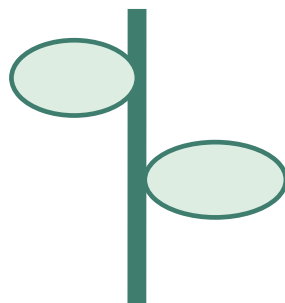

More is not always better. Requirements vary.

Light, water and minerals matter. Use suitable warmth, air and space. Requirements work together.

I refuse to use height alone

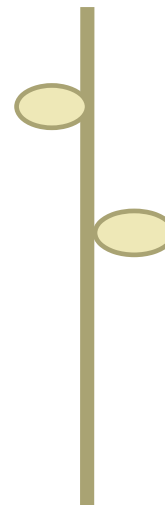

Constructed examples: day 7

A: light available
8 cm; green leaves

B: no light

13 cm; pale
small leaves

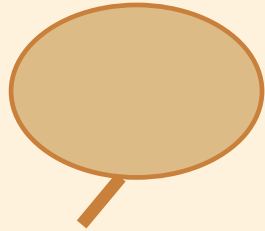

Record height AND leaf condition before judging growth.

A is shorter and green. B is taller and pale. Both observations matter.

I separate seed and green-plant stages

Germinating seed

Uses stored reserves.
Needs water, oxygen and
suitable temperature.

Established green plant

Needs light for sustained
sugar-making.

Some seeds also need light to germinate; check the species.

Seeds can use stored reserves. Established green growth needs light.

The evidence clinic: compare A and B

Read both height readings. Read leaf condition. Make a care judgement with a reason.

Group	Day 7 heights (cm)	Leaf evidence
A	8, 9	Green; several leaves
B	12, 13	Pale; small leaves
C	3, 4	Drooping; dry compost
D	4, 5	Green; little new growth

Constructed sample data: two seedlings per group; all started about 3 cm

Choose a repair that fits the condition

C: too little water.

D: unsuitable cool conditions.

Name a useful care change.

B is 13 cm and pale. A is 8 cm and green.

Which claim uses both clues?

- A** B must be healthier because it is taller.
- B** Height alone cannot establish which grows well.
- C** No green plant needs light.

Choose your science route

Complete a care checklist.

Write an evidence-based care brief.

Challenge a growth headline.

Make your own evidence record

Use the shared evidence.

Explain one choice.

Check a label or number.

Check what the evidence can show

Point to the clue you used.

Remove an unsupported claim.

Lundy loop: improve the shared account

Choose how to share.

Hear one evidence-based challenge.

Improve or defend one idea.

What changed when we added leaf evidence?

Keep the useful change

What changed in our account?

Which evidence helped?

Three final checks

E1. Name two plant-growth requirements.

E2. Is height alone enough to judge healthy growth?

E3. Do mineral nutrients replace light?
