

Shared evidence • Constructed growth clinic

The growth-needs clinic

Name _____ Date _____

Two young bean seedlings per group; all began about 3 cm. Same species, age, pots and observation interval. Only the stated care condition changed.

Group	Care condition	Day 7 heights (cm)	Leaf condition
A	Light; suitable care	8, 9	Green; several leaves
B	No light; other care same	12, 13	Pale; small leaves
C	Too little water; rest same	3, 4	Drooping; dry compost
D	Cooler; rest same	4, 5	Green; little new growth

Healthy green growth also requires air, suitable warmth, water, mineral nutrients and enough space. Amounts differ between plants. These records are supplied examples, not pupil measurements.

W1. Which group is taller, A or B? Which other clue matters?

W2. Give a suitable care change for C and for D.

Route 1 • Make the care checklist

Word bank: light / water / suitable warmth / mineral nutrients / air / space.

S1. Name four things needed for plants to grow well.

S2. Does B's greater height prove better health?

A. Yes

B. No

S3. Which leaf clue helps you judge B?

S4. In C, which stated requirement needs attention?

Route 2 • Write a care brief

Use at least two observations when comparing growth.

M1. Compare A and B using height and leaf condition.

M2. Give a care change for C and explain why it fits this case.

M3. Explain why “the hottest place and most water” is a poor rule.

M4. Explain why mineral nutrients do not replace light.

Route 3 • Challenge the headline

Headline: “Darkness is best for all plants because group B grew tallest.”

T1. Use two pieces of evidence to challenge the headline.

T2. Why can two seedlings per group not settle a claim about all plants?

T3. A seed germinates in darkness. Explain why this does not prove the headline.

T4. Give a better headline limited to these records.

Exit and reflection

Point, draw, write or tell an adult.

E1. Name two plant-growth requirements.

E2. Is height alone enough to judge healthy growth?

E3. Do mineral nutrients replace light?

R1. Which idea did you improve or defend? What evidence helped?

R2. What useful question would you investigate next?
