

A Balanced Plate

Plan a pretend café meal using ingredient cards.

Think about groups, cost and team jobs.

Speak, point, draw or ask an adult to write.

Which group contains rice?

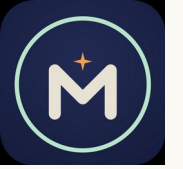

Look across a day or week

Food groups help us plan a range of ingredients.

A single plate does not have to include every group.

Different meals can contribute different ingredients.

Must every snack include all five groups?

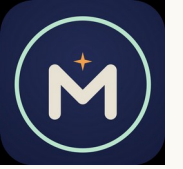

Watch me unpack a meal

Pretend rice bowl: rice, beans and tomatoes.

Rice: starchy. Beans: protein. Tomatoes: fruit and vegetables.

One bowl can include several groups.

Which ingredient gives this bowl its protein-food group?

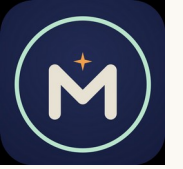

Three dishes, several groups

Porridge: oats and milk.

Jacket potato: potato and beans.

Sandwich: bread, cheese and cucumber.

Which dish includes dairy and alternatives?

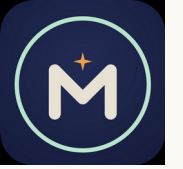

Plan the café special

Budget: 120p for one pretend meal.

Choose rice or a roll; beans; tomatoes or carrots.

A paper cup of tap water adds 0p to this classroom budget.

Which costs less: rice at 40p or a roll at 50p?

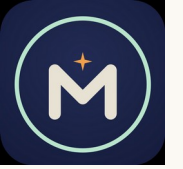

Choose, add and check

Rice 40p or roll 50p. Beans 40p.

Tomatoes 30p or carrots 30p.

Draw or write the meal. Add prices and check 120p or less.

Does rice + beans + tomatoes fit the budget?

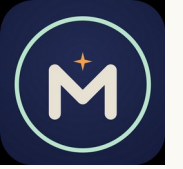

Give everyone a useful job

Planner: read the chosen ingredients and groups.

Checker: add the cost and check the brief.

Swap roles. Ask before moving someone else's cards.

What can the checker say if the total is unclear?

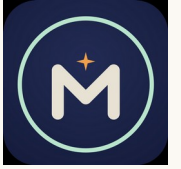

One plan, different possibilities

Sam's example day has oats and milk; rice, beans and tomatoes; a potato, lentil and carrot soup with a little rapeseed oil.

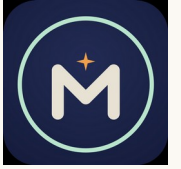

Point to the five groups across the example.

No one meal has to contain them all.

One plan, different possibilities — continued

Where are oils and spreads represented?

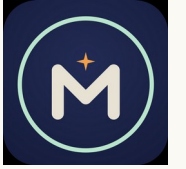

Show one decision

Point to your chosen meal.

Explain a food-group, cost or team-job decision.

Collect cards and reset the table.

Show one decision — continued

A meal contains rice and beans. Must it include all five groups to count as a meal?
