

Prepare a snack and drink

Our make: fruit pot, oatcake and measured water.

Choose making, reading, checking or recording. Tasting is optional.

What should happen before any food is opened?

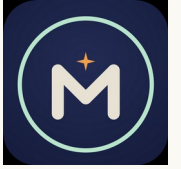

Words that help

ASSEMBLE

Put prepared parts together.

PORTION

An amount served for one person or task.

Know what is in it

Fruit: banana and mandarin.

Oatcake: a starchy food. Yoghurt: dairy or an approved alternative.

This snack is one example. A single snack does not have to include every food group.

Know what is in it — continued

Does bright colour prove food is safe or suitable?

Read before you swap

The recipe uses plain yoghurt. A substitute pot says “contains SOYA”.

A pupil says, “It is a different yoghurt, so it must be fine.”

What must happen before using the substitute?

Our amounts for one

About 50 g banana, 50 g drained mandarin, 50 g yoghurt and 1 oatcake.

Measure 150 ml drinking water in a jug.

The full ingredient, tool and method card is on your table.

Which unit measures the water?

Watch the measuring

Put the empty dish on the scales and press zero. Add the first ingredient.

Zero again before adding the next ingredient.

Read the water mark with the jug level and your eyes beside the mark.

Why do we zero the scales with the dish on them?

Read, make, check

Read one recipe step, do it, check it, then tick: prepare fruit, weigh, assemble and pour.

Stop at each step for your partner's check. Keep the oatcake separate.

Return chilled ingredients promptly; use clean serving tools.

Read, make, check — continued

What can a checker say that helps?

Look at the evidence

Find one correct amount and one safe action.

Compare the finished components with the recipe, using sight or the process record.

You may observe, describe or taste after adult approval.

Look at the evidence — continued

What could you improve without tasting?

Record and reset

Record: what I measured, the unit and the tool.

Name the job you did for the team.

Clear waste, clean equipment, account for tools and wash hands.

How did your job help the next step?

One amount, one check

Finish: “I measured ____ using ____.”

What would you do if the food label were missing?
