

Plan a meal to a brief

Plan a cold lunch for a fictional school club.

Today is a planning and evaluation lesson; no food needs to be handled.

What makes a plan useful to someone else?

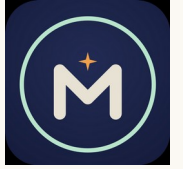

Words that help

PLAN

Decide steps and resources before making.

BUDGET

The money limit for a task.

The club's brief

Plan one cold lunch set: a wrap, a piece of fruit and a yoghurt or adult-approved alternative.

Use the supplied ingredients, with an illustrative ingredients-used cost of no more than £1.50.

Show label checks, chilled storage and a clear making order.

The club's brief — continued

Which part of the brief is a money limit?

Choose and name components

Wrap: tortilla, chickpeas, cucumber and soft cheese.

Sides: one apple and one plain yoghurt pot.

Water can be served alongside; check the full ingredient labels before real use.

Choose and name components — continued

Which food group does each wrap ingredient belong to?

Add the given costs

Invented classroom costs: wrap 70p, apple 30p, yoghurt 25p.

$$70p + 30p + 25p = 125p = £1.25.$$

The brief allows £1.50, so 25p remains.

Would two wraps plus these sides fit the same £1.50 limit?

Check the changed plan

An alternative yoghurt costs 40p in this classroom example.

The adult has not yet checked its actual ingredients.

Can the plan be approved yet?

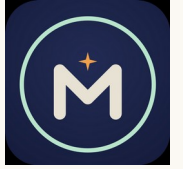

Make a workable order

A: Measure and mash chickpeas; mix in soft cheese.

B: Check labels and complete the hygiene routine.

C: Add prepared cucumber, fold, serve promptly or cover and chill.

Put A, B and C in order.

Build the lunch plan

Draw or place a wrap, apple and yoghurt on your plan. Add amounts and costs from the cards.

Write or say who reads, measures and checks.

Circle where the adult label check and chilled storage happen.

Build the lunch plan — continued

Can a partner follow your plan without guessing?

Evaluate and improve

Check: required components, cost limit, safe plan and clear order.

Use met, not yet or need evidence with a reason.

Change one weak point, then check it again.

“It looks nice” proves which cost or safety checks?

A plan you can test

Finish: “My plan meets ____ because ____.”

What must happen before a paper plan becomes real food?
