

Jamie and Morgan - complete journeys

Lesson 1 · Career development: where am I now?

Both people and journeys are fictional teaching examples. They are not route guarantees or live course information.

Jamie enjoyed practical problem-solving at school. Jamie later began an apprenticeship, worked in a trade, took on supervision and continued learning about safe work.

Morgan enjoyed art and computers. After college, Morgan worked in retail while practising design software, then moved into junior digital-design work and continued learning.

The cases omit exact dates, ages, providers, qualifications, pay and individual support arrangements.

A reader can compare the changes but must not invent the missing details.

Teacher answers are in the [separate guide](#).

Baseline and question-builder cards

Lesson 1 · Career development: where am I now?

Personal ratings may stay private. For a fictional case use stated / unknown instead of claiming personal confidence.

Can explain job and career.

Can name an area worth exploring.

Can name a skill with evidence.

Can identify a source or person to ask.

Question stem: What does the role involve?

Question stem: What learning routes or support should I investigate?

Question stem: What new information might change this shortlist?

Rowan's evidence record

Lesson 2 · Strengths with evidence

Complete fictional case. Use only stated facts when writing evidence.

In a classroom display project, Rowan sorted six cards into groups.

Rowan checked every label and corrected two mismatches.

The first layout did not fit. Rowan used a teacher-provided grid and revised it.

The revised arrangement fitted the board.

Rowan explained the changes to a partner.

There is no information about qualifications, attendance, employment or performance in other tasks.

Teacher answers are in the [separate guide](#).

Evidence-quality comparison cards

Lesson 2 · Strengths with evidence

Rank by specificity, then state each claim's limits.

A: "I am organised."

B: "During the project I sorted the materials before starting."

C: "I have a certificate."

D: "I always solve every problem perfectly."

E: "When the layout failed, I used the grid and revised it so the cards fitted."

Teacher answers are in the [separate guide](#).

Maya and the two fictional placements

Lesson 3 · Interests, values and working preferences

These are invented comparison options, not real vacancies, typical-sector claims or promises of a placement.

Maya enjoys creative tasks and making clear plans. Quieter conditions help concentration. Maya also likes learning and helping people.

Option A: create classroom display layouts in a calmer studio; a steady timetable; repeated design tasks; occasional group planning.

Option B: help plan community events; different tasks and frequent group contact; some noisy activity; changes in the schedule.

Both options are described as supervised, respectful learning settings. Actual access arrangements would need checking.

No pay, travel, age criteria or qualification requirements are supplied.

Priority and uncertainty cards

Lesson 3 · Interests, values and working preferences

Use to compare preferences without a job-predictor score.

Interest: what tasks attract your attention?

Value: what matters to you, such as purpose, learning or income?

Preference: what working pattern helps?

Evidence: what does the option actually say?

Unknown: what needs checking?

Boundary: dignity, safety and fair treatment remain expectations.

Kai's enquiry - full fictional case

Lesson 4 · Identity, stereotypes and opportunity

Analyse the case; no pupil must disclose identity, discrimination or financial circumstances.

Kai is interested in vehicle maintenance and has shown careful practical fault-finding during school projects.

The nearest provider described in the scenario has a start time that does not match the available bus service.

An adult comments, "That course is not for people from your background."

Kai has not yet checked the provider's current entry criteria, other routes or any transport support.

The card contains no evidence that Kai cannot learn the required skills. It also does not guarantee acceptance or a funded solution.

Diverse fictional examples

Lesson 4 · Identity, stereotypes and opportunity

Use one case to challenge an assumption while retaining genuine requirements.

Noor uses a wheelchair, follows a technical checking sequence and works at an accessible practice bench. The exact role and arrangements need investigation.

Elliot is male, interested in care work and practises calm, respectful communication. Training and actual role duties still matter.

Jules speaks little in large groups but contributes written plans and responds carefully in a project team.

No case is a real biography or a promise about recruitment.

[Teacher answers are in the separate guide.](#)

Sam's exhibition-project evidence

Lesson 5 · Transferable skills and employability evidence

Complete fictional case. This differs from the BUILD display case by explicitly supplying digital actions.

Sam checked a materials checklist before the group began.

Sam agreed who would measure and who would arrange the display, then completed the agreed part.

Sam explained the plan to the group and listened to one suggested change.

A material was missing; Sam asked staff to check whether an alternative was safe and suitable.

Sam used a document editor to format a title, then saved the file in the project folder.

The record does not say whether Sam could later find the file again, how quickly the work was done or how much prompting was used.

Teacher answers are in the [separate guide](#).

Evidence and practice planner

Lesson 5 · Transferable skills and employability evidence

Use one row per skill. A short accurate statement is enough.

Communication: sharing information, listening or using an agreed communication aid.

Teamwork: own contribution to a joint task.

Problem-solving: a stated problem and a suitable response.

Organisation: a plan, sequence, checklist or managed resource.

Digital: purposeful use of a device or software.

Practice plan: one skill → one small action → support/source → a check or review time.

Six career-family exploration cards

Lesson 6 · Exploring career families

Original broad prompts, not exhaustive sector definitions or current role specifications. A role may connect with more than one family. Check a specific role before making decisions.

People & Care: examples include education, health support and social care. Explore communication, supporting others, records and teamwork; tasks and training vary.

Creative & Digital: examples include design, media and software. Explore making content, testing ideas and digital problem-solving; playing a game alone does not show interest in creating one.

Construction & Engineering: examples include trades, technical maintenance and manufacturing. Explore practical or technical tasks, checks and problem-solving; roles differ greatly.

Business & Organisation: examples include administration, retail coordination and logistics. Explore planning, records, customer communication or movement of materials.

Environment & Outdoors: examples include horticulture, conservation and animal-related work. Explore practical tasks, observations and records; some roles mix indoor and outdoor work.

Public & Community: examples include local services and public administration. Explore service, procedures, communication and organisation; requirements vary by role.

Jordan and the comparison key

Lesson 6 · Exploring career families

Fictional profile. Use all four criteria and keep missing information visible.

Jordan repairs small models in school projects and enjoys seeing a working result.

Jordan explains practical steps to a classmate and likes being helpful.

Jordan checks materials against a list and persists with digital puzzles.

Jordan values helpful, respectful teams and clear instructions.

Outdoor-work preferences, shift preferences and interest in making digital content are not stated.

Key: supported = direct evidence; possible = plausible link to test; mismatch = an evidenced conflict to investigate; unknown = no information yet.

Teacher answers are in the [separate guide](#).

Sam's complete evidence portfolio

Lesson 7 · My career profile and enquiry plan

Fictional alternative for absent pupils or those choosing privacy. This supports analysis, not a personal vocational assessment.

Sam checked materials against a list before a classroom food project.

Sam explained practical steps to a partner and listened to feedback.

Sam built a card model, then revised it after feedback so its parts fitted.

Sam formatted a display title in a document editor and saved the file in the project folder.

Sam enjoys practical making, food projects and a visible finished result; helpful teamwork and clear expectations matter.

Written steps and time for questions support Sam's participation.

Sam has not researched specific role tasks, current entry routes, schedules, progression or available adjustments.

Teacher answers are in the [separate guide](#).

Enquiry-plan and review checklist

Lesson 7 · My career profile and enquiry plan

Use three rows: question / source or person / how the answer could affect the shortlist. Add a next action and review point.

Role question: What are the actual tasks in a named role? Source: a current National Careers Service role profile; note title and date checked.

Route question: What current routes or entry criteria apply? Source: the actual provider or course information, checked with school careers staff where needed.

Conditions question: What working arrangements or support could be discussed? Source: appropriate provider or careers adviser; availability is not assumed.

Next action: compare two role profiles next Careers lesson with staff support.

Review: one supported fact and one unresolved question per role; adjust shortlist if evidence changes.

Assessment: profile evidence, justified shortlist, explicit uncertainty and feasible enquiries.
