

Design for a user

Plan a small card pocket, with a flat-decoration alternative.

Choose a fictional user or keep your idea impersonal.

What should the drawing tell the maker?

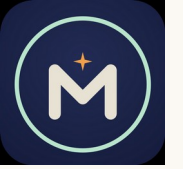

Words that help

BRIEF

The job and checks that a design must satisfy.

PROTOTYPE

A first version made to explore and test a design.

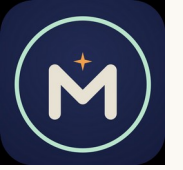

Read the pocket brief

The club helper needs a desk pocket for a 60 × 50 mm paper task card.

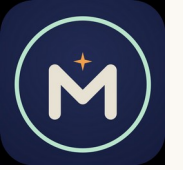

The folded pocket is about 100 × 70 mm, with two 10 mm side joins.

It must accept the card and keep both joins closed through three gentle cycles.

Read the pocket brief — continued

Which check is about function rather than appearance?

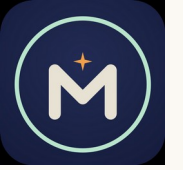

Compare two original ideas

Signal pocket: a large triangle on the front.

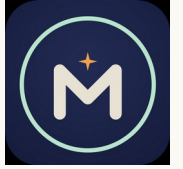

Stripe pocket: two broad drawn stripes.

Both keep the opening and side joins clear.

Compare two original ideas — continued

What would you change for Rowan, who wants a quiet, simple design?

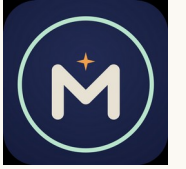

Read the dimensions

Blank: 100 mm wide and 170 mm high. Measure from the top short edge.

Fold marks: 30 mm and 100 mm down.

Two 10 mm side joins leave about 80 mm inside width.

Does a 60 mm-wide card have planned clearance?

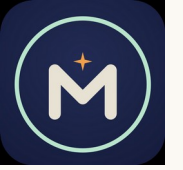

Model the labelled plan

Name the actual sample and the property evidence behind its choice.

Show where each cold join goes and which edge stays open.

Place a symbol on the outside front, away from joins.

What is missing from “Use felt because it is good”?

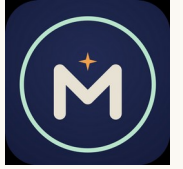

A plan with a flaw

The drawing marks tape across all four edges.

It says “card pocket”, but no edge is left open.

What must change before making?

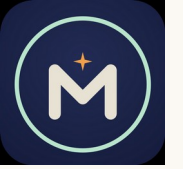

Create the design

Choose user, fabric/sample or model material, cold join and symbol.

Label dimensions and both folds; add a property reason.

Number the making steps and identify the adult approval check.

Could your partner locate the two side joins?

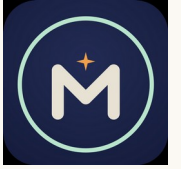

Peer check: could I make it?

Find user/purpose, material, join, size and decoration.

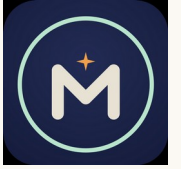

Check the making order for your item: pocket folds and opening, or a flat panel join.

Add one missing detail before saving the plan for Week 7.

Peer check: could I make it? — continued

Which change made your plan more usable?

Plan the first safe step

Finish: “Before I make, I need to check ____.”

Does a clear drawing prove the finished join will hold?
