GROW FoodWise

Autumn 1 · Uploaded D&T FoodWise sequence · Weeks 1-4 · Four 40-minute lessons

Four complete lessons built from the uploaded FoodWise decks and logs, with practical teamwork, complete cold recipes, offline alternatives, editable pupil records and evidence-based evaluation. This four-week food block is separate from the upload's later textiles lessons. Existing GROW kitchen programme planning references remain unverified for formal assessment; these teaching activities make no accreditation or award promise.

Using this pack

- Open index.html for the lesson and download menu, or use the editable PowerPoints. Keep this teacher guide separate from pupil copies.
- Print the two pupil activity pages for the lesson and its resource cards. Check activity materials and individual access needs before teaching.
- The 40-minute plans include response time and a closing check. Record the level of support and the pupil response; a completed page alone does not prove independent understanding.
- The HTML lessons work offline after the ZIP is extracted. The online Lessons link and external source links need an internet connection.
- Source codes are retained as planning references only. This pack does not certify ASDAN or AQA achievement; check current centre requirements before banking evidence.

Lesson sequence

1 | Safe hands, safe kitchen Follow a hygiene routine, recognise hazards and practise an agreed tool skill safely.

2 | Make a snack and drink Use a complete cold recipe to wash, measure, assemble and reset safely.

3 | Read it, make it Read, measure and follow a numbered cold recipe, checking each step.

4 | Judge it against the brief Use observable evidence and illustrative cost data to evaluate a snack against a brief.

TEACH / GROW_FOOD_W1

Safe hands, safe kitchen

Lesson 1 · 40 minutes

Follow a hygiene routine, recognise hazards and practise an agreed tool skill safely.

Before the lesson

- Check actual ingredient labels, use-by dates, storage instructions and individual plans; agree any substitution before the session.
- Prepare handwashing, clean worktops, separate clean utensils and waste area; adult manages cleaning chemicals according to the product label.
- Keep chilled ingredients at 0-5°C until needed; check the fridge thermometer. Return unused chilled ingredients promptly and follow pack opening instructions.
- Set up only the tools approved for this class. Have banana pieces or a non-food model ready; no heat, grater or peeler is required.

Materials: Soap, water, disposable towels, aprons and adult-managed cleaning supplies.; Stable boards, approved table knife, banana or safe practice model, printed routine and hazard cards.

Minutes	Teach, practise and check
3	Settle, choose role and recall safety.
7	Demonstrate routine and tool stop/placement.
7	Read and sort hazard situations.
12	Supervised circuit and observation.
5	Record and explain the process.
4	Adult checks tools are accounted for and manages washing sharp items separately; pupils wash safe utensils, clear waste, clean the workspace as directed and wash hands.
2	Individual exit check.

What success can look like

- I can show the handwashing and ready-to-work routine.
- I can stop and ask before an unsafe action.
- I can explain how one rule protects the team.

Care and boundaries: Check the school risk assessment, pupil food/allergy and swallowing plans privately, and actual ingredient labels before the lesson. Use the school response plan if anyone becomes unwell. An adult approves substitutions and supervises tool work. No tasting or food contact is required: observer, reader or recorder roles count. Never force physical guidance; agree support and use demonstration, adapted tools or adult preparation. Do not record identifiable pupil details in website files.

Assessment: Observe the hygiene sequence, response to stop cue and safe tool placement. Record independent, prompted or not yet shown. A correct spoken safety explanation can be credited separately from an observed practical skill.

Support and teaching notes

Safe hands, safe kitchen

Model the thinking

Think aloud while washing, checking the board and parking the table knife. Deliberately narrate a stop when information is missing; never stage a real unsafe action.

Access and support

BUILD: one instruction at a time, two hazard choices, adult-prepared ingredients and a reader/observer role. GROW: name the hazard and explain the consequence; record the prompt used.

Extend the thinking

Explain two ways a used spoon could contaminate ready-to-eat food and describe separate prevention steps.

If the practical or activity cannot run

Complete the written hazard sort and rehearse the routine without ingredients. Model safe tool placement using a printed tool card; label this as simulation.

Likely misconceptions

- An apron alone does not make food work hygienic.
- A visible clean surface does not prove an allergen is absent.
- Completing today's check does not qualify a pupil to use tools unsupervised.

Model responses and checks

Safe hands, safe kitchen

- 1. My ready routine:** All three are needed before food work; record support accurately.
- 2. Fix a hazard:** Wash and dry hands; keep hands out and tell adult; stop and ask adult for separately prepared food and clean equipment.
- 3. Explain a rule:** Washing reduces contamination; unfamiliar food may not match a person's agreed allergy plan. Accept accurate simple explanations.

Exit check: No. Check cleaning and allergen cross-contact with the adult.

Kitchen routine | Read, show, check

Look for the action, prompt given and safe response. Praise stopping and asking for help. No pupil should receive unsupervised tool access because a previous task was completed.

Six kitchen situation cards

- A: Ready if the individual plan and actual ingredients are approved.
- B: Pause; wash and dry hands before touching food. Replace food or utensils already contaminated as directed.
- C: Stop; keep hands out and tell the adult so they can retrieve it safely.
- D: Stop; do not use it. Ask the adult for separately prepared food and clean equipment under the agreed plan.
- E: Pause; keep people away and alert the adult so the spill can be cleared safely.
- F: Do not use it. Smell cannot establish safety after a use-by date.

Slideshow responses

Safe hands, safe kitchen

Safe hands, safe kitchen: A clear plan, clean hands/equipment and adult approval.

A clean-looking table?: No. Tell the adult, clear and clean the food surface correctly, then wash hands.

Our ready routine: Pause, wash and dry hands before food work resumes.

A tool has a safe place: Stop, set it flat safely and ask the adult.

Watch: slice, pause, park: A safe hold, small cut, pause and safe placement are valid responses.

Ready, pause or ask?: A: ready if approved. B: stop and ask for checked food/clean tools. C: pause, keep others clear and tell the adult.

Safety circuit: For example: “You parked the knife before asking a question.”

Record the process: For example: wash after touching hair; keep equipment separate; stop and ask.

Stop is a useful skill: Keep hands out, stop and tell the adult.

Make a snack and drink

Lesson 2 · 40 minutes

Use a complete cold recipe to wash, measure, assemble and reset safely.

Before the lesson

- Check actual ingredient labels, use-by dates, storage instructions and individual plans; agree any substitution before the session.
- Prepare handwashing, clean worktops, separate clean utensils and waste area; adult manages cleaning chemicals according to the product label.
- Keep chilled ingredients at 0-5°C until needed; check the fridge thermometer. Return unused chilled ingredients promptly and follow pack opening instructions.
- Use the full fruit-pot recipe. Adult opens/drains mandarin tins and portions items if needed; confirm any swallowing texture adjustments.
- Print recipe and task sheet; make ingredient amounts visible at each station.

Materials: Per pupil practice portion: about 50 g peeled banana, 50 g drained mandarin, 50 g yoghurt, 1 oatcake, 150 ml drinking water.; Board, approved table knife or pre-cut banana, scales, dish, clean spoons, jug, cup, labels and covered containers.

Minutes	Teach, practise and check
3	Roles, readiness and recall.
5	Ingredients, label scenario and amounts.
7	Model routine and measuring.
14	Supported practical using the full recipe.
4	Observe, record and explain one skill.
5	Adult checks tools are accounted for and manages washing sharp items separately; pupils wash safe utensils, clear waste, clean the workspace as directed and wash hands.
2	Exit check.

What success can look like

- I can follow the agreed preparation routine.
- I can measure an ingredient or drink and assemble a portion.
- I can name a skill and check it against the recipe.

Care and boundaries: Check the school risk assessment, pupil food/allergy and swallowing plans privately, and actual ingredient labels before the lesson. Use the school response plan if anyone becomes unwell. An adult approves substitutions and supervises tool work. No tasting or food contact is required: observer, reader or recorder roles count. Never force physical guidance; agree support and use demonstration, adapted tools or adult preparation. Do not record identifiable pupil details in website files.

Assessment: Record a hygiene action, accurate measure with unit and tool, useful communication, and reset. Credit explanation or observer work separately from direct food handling.

Support and teaching notes

Make a snack and drink

Model the thinking

Model zeroing scales with the dish already on, adding 50 g, then zeroing for the next ingredient. Show a jug on a level surface and reading at eye level.

Access and support

BUILD: supply pre-cut fruit, amount cards and one job at a time; accept directing a partner. GROW: share rotating maker/checker roles and explain a measurement correction.

Extend the thinking

Calculate the fruit and yoghurt amounts for two equal practice pots; explain how the checker can prevent an error without taking over.

If the practical or activity cannot run

Use labelled paper ingredient cards to assemble a planned portion, then practise measuring 150 ml water. Record simulated steps honestly; the full lesson is offline.

Likely misconceptions

- A substitute labelled plant-based is not automatically suitable for an allergy.
- Food colour does not prove safety, suitability or overall nutritional quality.
- The number on scales includes the bowl unless zeroed.

Model responses and checks

Make a snack and drink

- 1. My make:** Accept an accurate labelled record without a photo; no tasting evidence needed.
- 2. Measure and check:** Yoghurt 50 g/scales; water 150 ml/measuring jug for this recipe; zero/tare.
- 3. Team process:** Sam reader, Jo maker, Lee checker. Accept specific actions such as clean spoon or zero scales; next step should be observable.

Exit check: No. Safe preparation, measuring, communication and reviewing the process are assessed.

Recipe | Fruit pot, oatcake and water

Food groups in this example: banana/mandarin = fruit and vegetables; oatcake = starchy foods; yoghurt = dairy and alternatives. Water is a drink, not one of the five food groups.

Observe wash, measure, prepare/assemble and reset; assess the process even if a pupil does not eat or handle the ingredients.

Kitchen routine | Read, show, check

Look for the action, prompt given and safe response. Praise stopping and asking for help. No pupil should receive unsupervised tool access because a previous task was completed.

Slideshow responses

Make a snack and drink

Make a snack and drink: Adult checks the actual labels and agreed plans; team completes the hygiene routine.

Know what is in it: No. Check ingredients, storage and the agreed plan.

Read before you swap: Stop; the adult checks the full new label and the person's agreed plan.

Our amounts for one: Millilitres, written ml.

Watch the measuring: So we measure the ingredient, not the dish.

Read, make, check: "The recipe says 50 g. Let's check the display before moving on."

Look at the evidence: Measure more accurately, keep oatcake separate, check steps or arrange the portion securely.

Record and reset: For example: reading the amount helped the maker weigh the correct ingredient.

One amount, one check: Stop and ask the adult; do not guess or taste to check.

[DT_Aut1_W2_Log_I_Made_This.docx](#)

Read it, make it

Lesson 3 · 40 minutes

Read, measure and follow a numbered cold recipe, checking each step.

Before the lesson

- Check actual ingredient labels, use-by dates, storage instructions and individual plans; agree any substitution before the session.
- Prepare handwashing, clean worktops, separate clean utensils and waste area; adult manages cleaning chemicals according to the product label.
- Keep chilled ingredients at 0-5°C until needed; check the fridge thermometer. Return unused chilled ingredients promptly and follow pack opening instructions.
- Adult opens canned chickpeas, confirms they are ready-to-eat, drains/rinses and removes the can. Wash and dice cucumber in advance where required.
- Trial the approved tortilla fold and have printed large-step recipe cards available.

Materials: Per wrap: 1 small ready-to-eat tortilla, 40 g drained ready-to-eat chickpeas, 30 g cucumber, 15 g soft cheese.; Scales, bowl, fork, spoon, rounded spreading knife, board, plate, recipe, recording sheet and covered containers.

Minutes	Teach, practise and check
3	Recall and roles.
6	Recipe structure and detective questions.
6	Model measures, mix and fold.
15	Follow the numbered recipe in pairs.
3	Record amounts and checked evidence.
5	Adult checks tools are accounted for and manages washing sharp items separately; pupils wash safe utensils, clear waste, clean the workspace as directed and wash hands.
2	Exit and double-amount challenge.

What success can look like

- I can find an ingredient, amount and method step.
- I can measure and follow steps in order.
- I can explain how a check helped the team.

Care and boundaries: Check the school risk assessment, pupil food/allergy and swallowing plans privately, and actual ingredient labels before the lesson. Use the school response plan if anyone becomes unwell. An adult approves substitutions and supervises tool work. No tasting or food contact is required: observer, reader or recorder roles count. Never force physical guidance; agree support and use demonstration, adapted tools or adult preparation. Do not record identifiable pupil details in website files.

Assessment: Observe use of the recipe, measuring, safe step sequence and a meaningful checker contribution. Collect two amounts with units. Do not score taste or willingness to eat.

Support and teaching notes

Read it, make it

Model the thinking

Read step 2 aloud, show tare, add 40 g, check with the partner, mash, then tick. Narrate the difference between an ingredient quantity and the action needed.

Access and support

BUILD: adult-prepared cucumber, one step visible at a time, short verb/amount cards and paper fold rehearsal. GROW: prompt from the written recipe and ask the checker to explain any correction.

Extend the thinking

Scale all four ingredients for two wraps and explain which safety checks stay the same.

If the practical or activity cannot run

Sequence the full written method and practise a paper fold. Use labelled ingredient tokens for measures and explain the difference between simulated and observed practical skills.

Likely misconceptions

- A tick records completed work, not intended work.
- Method order can affect whether the finished wrap holds together.
- Independent reading does not mean unsupervised tool use.

Model responses and checks

Read it, make it

1. Read the recipe: Chickpeas, soft cheese or tortilla; measure/mash/add/mix/spread; mix.

2. My measures: 40 g; 15 g; 80 g; scales.

3. Order and evidence: Order: measure/mash; add/mix; spread; fold. A specific observed check is valid, e.g. scales read 40 g.

Exit check: The step has been completed and checked; it should not be ticked in advance.

Recipe | Chickpea and cucumber wrap

Two wraps need 2 tortillas, 80 g chickpeas, 60 g cucumber and 30 g soft cheese.

The measurable process is read, do, check and tick. The adult records demonstrated food skills separately from simulated planning.

Kitchen routine | Read, show, check

Look for the action, prompt given and safe response. Praise stopping and asking for help. No pupil should receive unsupervised tool access because a previous task was completed.

Slideshow responses

Read it, make it

Read it, make it: Ingredients, amounts, tools, method and the adult-approved safety/allergy plan.

Two parts of a recipe: An ingredient amount.

Recipe detectives: Measure, mash and mix the filling; prepare the cucumber.

Measure accurately: Yes: $40\text{ g} + 15\text{ g} = 55\text{ g}$ if the empty bowl was zeroed first.

A missing ingredient: Pause and ask the adult to approve a suitable substitution before continuing.

Follow the page: Pupil locates their own next unticked step and reads, points to or explains it.

Check the finished wrap: No. A tick should record a completed, checked action.

Record, then reset: For example: re-reading 15 g prevented adding too much spread; checking the edge helped the fold.

Scale the recipe: 80 g. BUILD support: $40\text{ g} + 40\text{ g}$.

[DT_Aut1_W3_Log_My_Recipe_Record.docx](#)

Judge it against the brief

Lesson 4 · 40 minutes

Use observable evidence and illustrative cost data to evaluate a snack against a brief.

Before the lesson

- Check actual ingredient labels, use-by dates, storage instructions and individual plans; agree any substitution before the session.
- Prepare handwashing, clean worktops, separate clean utensils and waste area; adult manages cleaning chemicals according to the product label.
- Keep chilled ingredients at 0-5°C until needed; check the fridge thermometer. Return unused chilled ingredients promptly and follow pack opening instructions.
- Choose repeat make or paper evaluation before the lesson; both routes use the same brief and evidence.
- For a repeat make, pre-portion the approved wrap ingredients and pre-dice cucumber; protect time for evaluation. Print fictional evidence and illustrative cost cards.

Materials: Full wrap recipe, pre-portioned ingredients and tools if making; otherwise the complete fictional records.; Cost cards, brief grid, pencils, timer and clean covered containers.

Minutes	Teach, practise and check
3	Recall and define brief.
7	Model criteria, verdicts and 70p cost.
10	Optional repeat make or paper product inspection.
8	Evaluate evidence and complete cost task.
5	Compare verdicts and choose improvement.
5	Adult checks tools are accounted for and manages washing sharp items separately; pupils wash safe utensils, clear waste, clean the workspace as directed and wash hands.
2	Exit evidence check.

What success can look like

- I can find the checks in a design brief.
- I can use evidence and cost data to judge each check.
- I can choose one useful improvement and explain why.

Care and boundaries: Check the school risk assessment, pupil food/allergy and swallowing plans privately, and actual ingredient labels before the lesson. Use the school response plan if anyone becomes unwell. An adult approves substitutions and supervises tool work. No tasting or food contact is required: observer, reader or recorder roles count. Never force physical guidance; agree support and use demonstration, adapted tools or adult preparation. Do not record identifiable pupil details in website files.

Assessment: Collect four criterion judgements supported by the provided or observed evidence, a correct cost calculation and one testable improvement. Accept oral, pointing, drawing or scribed responses; assess actual practical skills only when observed.

Support and teaching notes

Judge it against the brief

Model the thinking

Model a met verdict using the 70p sum. Then model need evidence for an unrecorded safety check: pause serving and ask, rather than turning a neat photograph into safety proof.

Access and support

BUILD: one criterion at a time; point to met/not yet/need evidence and use pre-added cost cards.
GROW: justify all four verdicts and explain a targeted improvement.

Extend the thinking

Derive each used-ingredient cost from the whole-pack data, then explain an exclusion such as packaging before discussing a real selling price.

If the practical or activity cannot run

Use Product A and B fictional evidence cards with the complete recipe and prices. This paper route retains full evaluation and numeracy objectives.

Likely misconceptions

- Preference is not the same as meeting a brief.
- An unrecorded check means evidence is missing; it does not justify assuming it happened.
- Ingredient-used cost and the whole shopping bill are different.

Model responses and checks

Judge it against the brief

- 1. Find the brief checks:** Safety/ingredients, function, time and cost.
- 2. Work out the cost:** 70p; 30p remaining; whole packs contain more than one wrap's ingredients.
- 3. Give an evidence-based verdict:** Time and safety record met; cost and holding filling not yet. Use stated amounts/recalculate cost or improve fold/recheck holding. Accept one specific supported change.

Exit check: There is not enough information to judge that check; gather it before deciding.

Recipe | Chickpea and cucumber wrap

Two wraps need 2 tortillas, 80 g chickpeas, 60 g cucumber and 30 g soft cheese.

The measurable process is read, do, check and tick. The adult records demonstrated food skills separately from simulated planning.

Cost cards | Illustrative classroom data

Tortilla: $150\text{p} \div 6 = 25\text{p}$. Chickpeas: $120\text{p} \div 6 = 20\text{p}$. Cucumber: $100\text{p} \div 10 = 10\text{p}$. Soft cheese: $200\text{p} \times 15 \div 200 = 15\text{p}$.

One wrap: $25\text{p} + 20\text{p} + 10\text{p} + 15\text{p} = 70\text{p}$. Two wraps: £1.40. Whole four packs: $\text{£}1.50 + \text{£}1.20 + \text{£}1.00 + \text{£}2.00 = \text{£}5.70$; unused ingredients remain.

Wrap, apple and yoghurt: $70\text{p} + 30\text{p} + 25\text{p} = \text{£}1.25$. Two such fictional lunch sets cost £2.50 in ingredients used.

Product evidence | A, B and C

A: all stated checks met in the fictional evidence.

B: recorded safety and time met; cost and holding filling not yet. Reduce filling to the stated amounts and/or practise fold; recheck the relevant criterion.

C: photo gives limited shape evidence. Safety, time and cost need evidence; do not infer these from appearance.

Slideshow responses

Judge it against the brief

Judge it against the brief: An observed check, measured amount, ingredient list or worked cost.

The lunch-club brief: Filling stays inside, time, completed routine, checked ingredients or cost.

Three possible verdicts: No. Mark need evidence and ask the adult; do not serve until safety is established.

What did this portion cost?: 70p counts only ingredients used in one wrap; £5.70 buys whole packs with ingredients left over.

Check a fictional product: All stated checks, based on the supplied record.

Make or inspect: Adult-confirmed ingredient/routine check before practical work; then process/time and finished function.

Choose a useful improvement: Use the stated 70p recipe amounts and/or practise the fold with a clear edge; recheck cost or whether filling stays inside.

Write the verdict: Yes: it should address a stated criterion or improve a safe process.

Evidence before judgement: No. It can show appearance/shape; safety, time and cost need other evidence.
