

Log on and complete a real task

Today: make a short plan that a fictional Makers Club member could follow.

We will open, do, save and check. Using support is allowed.

What would tell us the whole task is finished?

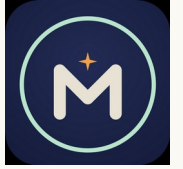

Words that help

SOFTWARE

A program used to carry out a task.

WORD PROCESSOR

Software for creating and editing written documents.

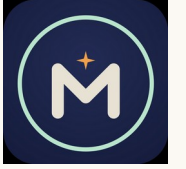

Start with an approved workspace

Use the school's usual login route. Keep passwords and codes off worksheets, photographs and shared screens.

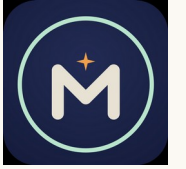

If access fails or a prompt seems unusual, pause and ask an adult.

Adjust the display or input method so you can work comfortably.

Start with an approved workspace — continued

Should you tell a partner your password so they can help?

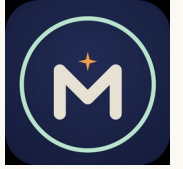

Choose the tool for the purpose

A short written session plan needs a word processor.

A set of slides needs presentation software.

A table that calculates vote totals needs a spreadsheet.

Which tool fits today's three-step plan, and why?

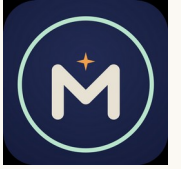

Our real task: a usable club plan

The club helper needs three steps: read the task card; draw two ideas; choose one and explain it.

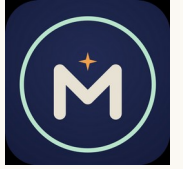

Open GROW_W1_Session_Plan_Starter.docx from the supplied starter folder.

The details are fictional; the editing and saving skills are real.

Our real task: a usable club plan — continued

What must the helper be able to understand?

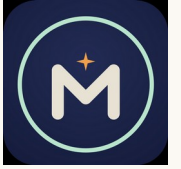

We do: edit one line

Select the first placeholder only. Replace it with: “First: read the task card.”

Check that the title and other lines are still present.

If an accidental edit happens, use Undo or ask for help before continuing.

Why check the page after replacing text?

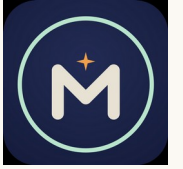

You do: finish the useful text

Next: draw two design ideas.

Finally: choose one idea and explain the choice.

Read the three steps in order; check capitals, spaces and full stops.

Can someone follow the plan without asking what “do it” means?

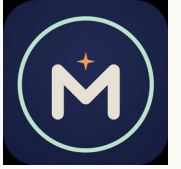

Save a copy you can find

Use the approved save/copy route. Name the file GROW_W1_Club_Plan_v1.docx.

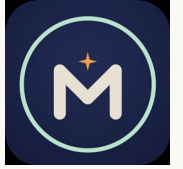

Choose the school-approved working folder and check its displayed location.

Save changes, then reopen the saved copy and read the final line.

Save a copy you can find — continued

Is seeing a file name enough to prove the last edit was saved?

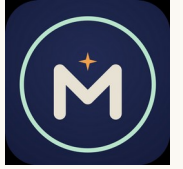

A sensible pause can prevent a problem

A window is hidden: check the open apps before opening another copy.

A login fails: ask an adult through the school route.

A strange download or permission request appears: stop and check.

Which problem is safe to investigate with an open-app check?

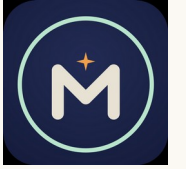

Your practical record

Task 1: explain the tool choice.

Task 2: complete the three-step file and save it.

Task 3: reopen, check and record a next step.

Which evidence shows a completed digital action?

Show the whole job

Point to the title and the final line in your reopened saved copy.

Name one place you can get help if access or saving is unclear.

What will you do before leaving the device?
