

Save, organise and find your files

Today: organise a disposable practice folder and find the right version again.

Only use the supplied copies. The task is about reliable finding, not a speed race.

What makes “Document1” hard to find later?

Words that help

FILE

A saved piece of digital work.

FOLDER

A container used to organise files.

Three files need clearer names

Document1.txt contains a Makers Club session plan.

notes.txt contains garden design notes.

Untitled2.txt contains Makers Club facts.

Suggest a useful name for the club plan.

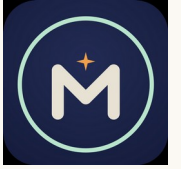

Name, location and version work together

Use a meaningful base name, such as Club_Plan, plus v1 for the first saved stage.

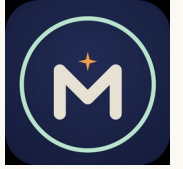

Use ICT for the club plan/facts and Design for the garden notes in this exercise.

Keep a later draft as a new version when you need to preserve the earlier one.

Name, location and version work together

Would “final_final_reallyfinal” be a clear version plan?

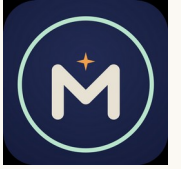

We do: organise a practice copy

Work inside your supplied GROW_W3_File_Practice copy. Create ICT and Design folders.

Copy Document1.txt from Inbox into ICT, then rename the copy Club_Plan_v1.txt.

Open it and check that the contents match the name.

We do: organise a practice copy — continued

Why check the contents instead of trusting a name?

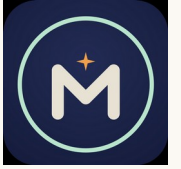

You do: give each copy a home

Copy notes.txt into Design and name it Garden_Notes_v1.txt.

Copy Untitled2.txt into ICT and name it Club_Facts_v1.txt.

Check that the three names describe what is inside.

Which file belongs in Design in our agreed plan?

A second version keeps an earlier stage

Make a copy of Club_Plan_v1.txt called Club_Plan_v2.txt inside ICT.

Add “Check: explain why the chosen design could work.” to v2, then save it.

Open v1 and v2 to check which one contains the new line.

What should remain in v1?

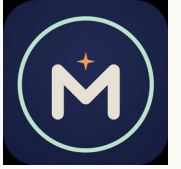

Where does the work live?

A file may be on the device, a school network drive or managed cloud storage.

A folder called Documents does not by itself tell you which of these applies.

Ask about the approved location and check saving/sync status for your setup.

Where does the work live? — continued

Does a cloud file always mean the latest edit is available everywhere?

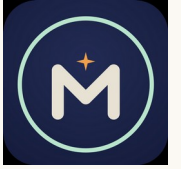

Find the intended version

Close the practice files after saving. Find ICT, then Club_Plan_v2.txt.

You may browse the folder or search by its name. Recent files can be a starting point.

Check the version name and the added Check line.

Find the intended version — continued

Why might opening the first recent file be insufficient?

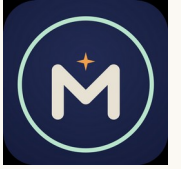

Your practical record

Task 1: plan meaningful names and folders.

Task 2: organise copies and preserve two plan versions.

Task 3: retrieve v2 and explain where it is stored.

What evidence shows the correct version was found?

Reliable beats rushed

Show where you would look for the latest practice plan.

Explain one habit that would help if work is hard to find.

Give a helpful habit.
