TA Brief

I can use a rotating-Earth model to explain day, night, and apparent Sun motion.

At check-out, record E for explaining the day-night cycle against the pupil's target.

At check-out, record E for today's lesson against each pupil's target on the evidence app.

No cold calling: Invite a response, give thinking time, and accept a pass. Point to Reference A or B, rephrase, then offer a two-word choice.

During You do: Record actual **I · S · C** per task. Use the participation-loop prompt so the pupil responds to feedback with an adult, and mark **R** only after the pupil has responded.

Feedback codes VF · WS · I · NS + … · E · R · // · ?
Give one feedback code. My response is the pupil's improvement to the work.
Adult checks the response and ticks it, or writes R (Pupil responded to feedback).

Exit pupil voice
What helped you today, and what would you change?
Accept a pointed, spoken, signed, drawn, written or chosen response. A pupil may pass.
