Reference A animal cells

Division makes more cells. Some descendants specialise as skin cells.

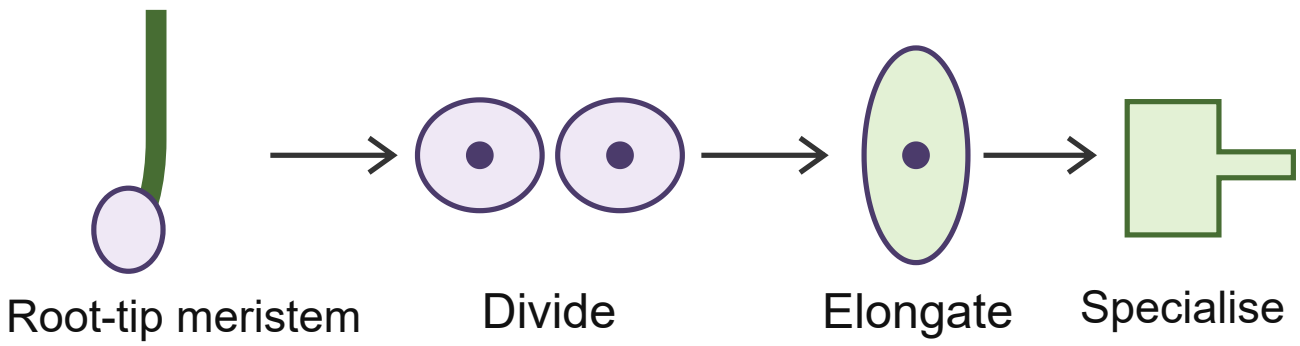

Reference only. Do not write on this sheet. Trace a feature, then explain its function.

Cell or source	Feature or range	Function or limit
Nerve cell	Long extension	Carries signals over a distance
Muscle cell	Structures that contract	Contraction produces force
Embryonic stem cell	Can give rise to many body-cell types	Not a promise of a successful treatment
Adult blood-forming stem cell	More limited range of blood-cell types	Makes replacement blood cells

The arrows show possible lineages. The drawing does not show every cell stage. Cells do not choose their own jobs. Specialised cells can share inherited DNA but use it differently.

Made by Matt

Reference B root growth

Root-tip meristem, division, elongation and differentiation in a simplified route.

Reference only. Do not write on this sheet.

Process or region	What it adds	Useful limit
Meristem	A region where cells divide	Not every root cell remains a meristem cell
Division	More cells	Number alone does not prove a specialised role
Elongation	Longer cells	Not the name for becoming specialised
Differentiation	Features suited to a job	Different cells can be at different stages

A root hair extension provides a large surface for absorption. The route is simplified. Use it to compare processes, not as a claim that every cell follows an identical sequence.

Arrival and exit Independent

Use the labelled picture on Reference A for question 1. Respond in your usual mode.

1. Which label names the first cell in the drawing?

2. What does mitosis followed by cell splitting add to a tissue?

3. How does making more cells differ from a cell gaining a specialised job?

4. Where in a growing root are cells made by division?

Exit ticket

1. Name a process shared by skin repair and root growth and say what it changes.

2. What extra evidence would help identify a specialised cell?

Pupil voice

What helped you most today, or what would you change next time?

Point, speak, sign, draw, write or choose. You may pass.

verbal · written · drawn · signed · symbol / choice-selected · demonstrated / re-attempt · adult-scribed. You may pass.

Made by Matt

You do Independent

Use your book or this sheet. Use Reference A and B. One response per task.

1. Explain how division and differentiation can help replace damaged skin cells. [3]
Staff I ☐ S ☐ C ☐

---

2. Compare skin repair and root growth. Use division, meristem and elongation. [3]
Staff I ☐ S ☐ C ☐

---

3. Repair this claim: more cells in a tissue proves that new specialised cell types formed. Use the cell count and name one extra check. [3]
Staff I ☐ S ☐ C ☐

Feedback and response · Independent

My response

Record one response to feedback in your usual mode. You may pass.

Adult checks the response and ticks it, or writes R (Pupil responded to feedback).
