# Guidance and staff card

**Prepared 3 November 2026**

Invite a response. Give thinking time. The learner may pass. Offer private answers and the usual response mode.

**Return to learning:** use the individual pause plan, give space, then return to the last secure step and one structured choice. Correct privately.

Use soft instrumental music for transitions if the class plan says so.

| Code | Meaning |
|---|---|
| VF | Verbal feedback given here |
| WS | Worked with support |
| I | Independent |
| NS + … | Next step one specific thing |
| E | Evidence captured on the evidence app |
| R | Responded loop closed after a pupil response and adult engagement |
| // | Self-edit point |
| ? | Read this back to me |

**At check-out, record E for today's lesson against each pupil's target on the evidence app**

Use observed evidence and record the support given. An edit is in the same colour, on the same page. Written feedback is used for extended writing when it adds value.

Codes follow the verified feedback policy, Issue 1. A button, saved answer or completed stage does not award a code.

**At check-out, record E for … against the pupil's target.**

**Feedback codes** VF · WS · I · NS + … · E · R · // · ?
Give one feedback code. My response is the pupil’s improvement to the work.
Adult checks the response and ticks it, or writes R (Pupil responded to feedback).

Made by Matt

Science · LAUNCH · Autumn 2 · Week 3 · SCI-LAUNCH-A2-W03-L2

# Teacher and cover plan

I can weigh a possible benefit and a risk in a fictional stem-cell case using evidence.

**At check-out, record E for … against the pupil's target.**

Total: 40 minutes. Start from the actual responses. Keep one case, a qualified judgement, review and the exit.

Week arc: Discover: stem-cell ethics. Use: weigh a stem-cell case. Master: a reasoned written judgement.

Kit: large prepared case cards, desk mat and labelled references. Build in quiet resets during shared work, independent work and review.

## Teaching sequence

| Stage | Minutes | Teaching and check |
|---|---|---|
| Arrival | 5 | Q1 checks picture access. Use the picture labels before asking about the results. Offer enlarged or tactile paper shapes; accept pointing before speaking. |
| Starter | 3 | Ask the original three retrieval questions in order. Invite a response and allow a pass. Reveal answers separately and revisit the success criteria. |
| I do | 3 | Read the fictional result. Model a narrow claim and point to the missing harm results. Make clear the case is made up for this lesson. |
| We do | 7 | Hear one reason before checking. Use the optional participation prompt and check the effect of any agreed change. |
| I do | 2 | Trace how each new check could affect the judgement. Ask what it would mean if both groups improved similarly. |
| We do | 5 | Hear a reason for each link. Check all four choices together, then ask how serious harms might change the recommendation in the fresh case. |
| You do | 8 | Hear a supported claim and a qualified judgement in the learner’s usual mode. Record actual independence and support. |
| Review and improve | 4 | Give one specific feedback point. Hear the edit or explanation and use it to choose the next prompt. |
| Exit ticket | 3 | Hear every response through the usual mode. Use it to change the next example or prompt. Keep one response and state the support actually used. |

## Stage timings

| Stage | Minutes |
|---|---|
| Today I can | 0 |
| Arrival | 5 |
| Starter | 3 |
| I do | 3 |
| We do | 7 |
| I do | 2 |
| We do | 5 |
| You do | 8 |
| Review and improve | 4 |
| Exit ticket | 3 |
| Tools & print | 0 |

**Total: 40 minutes**

**Feedback codes** VF · WS · I · NS + … · E · R · // · ?
Give one feedback code. My response is the pupil's improvement to the work.
Adult checks the response and ticks it, or writes R (Pupil responded to feedback).

**Exit pupil voice**
What helped you most today, or what would you change next time?
Accept a pointed, spoken, signed, drawn, written or chosen response. A pupil may pass.

Made by Matt

# P17 · SLT planning and evaluation

## Planned adaptations

| Need | Planned adaptation |
|---|---|
| Cognition and learning | Use one result and one visible label, then fade one cue. |
| Communication and interaction | Rehearse in pairs or respond by pointing, signing or exact scribing. |
| Regulation | Use the individual pause plan and return to one model choice. |
| Sensory and physical | Offer enlarged cards and adult-directed handling. |
| Language access | Pre-teach benefit, risk and evidence with a picture. |

## If behind

Use one comparison in the argument model. Keep a qualified judgement, review and exit. Record any change to coverage.

## Where catch-up is embedded

Use the picture at Arrival and the static references beside each model. The catch-up sheet replaces the first step after absence or an access barrier.

## Staff evaluation

| Prompt | Record after teaching |
|---|---|
| Delivery | Actual change and reason |
| Criteria | Response and support used |
| Adaptation | Change and effect on a fresh response |
| Coverage | Remaining teaching move |
| Evidence | Location on the evidence app and lesson code |

# P18 · Individual target opportunities

Use each learner’s existing targets. Leave pupil codes and target fields blank.

| Opportunity | Lesson evidence and adult response |
|---|---|
| Cognition and learning | Match an evidence card to a claim, then fade the cue. |
| Communication | Give a reasoned judgement using the agreed response mode. |
| Regulation | Request an adjustment and return to one step. Check the effect. |
| Sensory or physical access | Direct a choice or place a card with usual equipment. Record access support separately. |
| Language access | Use one precise science term in a fresh response. |

# Adult deployment and responsive feedback

Agree who leads the model and who checks access. Hear the learner’s reason privately if needed. Wait, point, rephrase and then offer a limited choice. Check a fresh case after prompting.

For the optional participation prompt, hear the learner, agree a possible change, explain any limit and check whether it helped.

Made by Matt

Science · LAUNCH · Autumn 2 · Week 3 · SCI-LAUNCH-A2-W03-L2

# First lesson back · once-only read

## Before the lesson · scan the books

Scan for five minutes. Find where teaching stopped and what responses were actually made. Look for access barriers and useful science evidence.

## Existing NS + is history

Do not chase, back-mark or retrospectively close earlier feedback. Begin fresh feedback from this lesson.

## Ask the cover teacher and TAs

Ask what was taught, which models were used, what changed for individuals and which responses were heard.

## Check the roll

Compare attendance with the available evidence. New arrivals start from what they show here; absence creates no automatic deficit label.

## Arrival read-off · decide by about minute eight

Q1 checks picture access. Use the next answers to check the reported result, the gap and the further check. If the benefit and the safety gap are confused, return to the case cards.

## After last lesson · one read, once

Read each exit against its criterion and the support used. Choose the next route from the least secure dependency. Teach next; do not reopen historical feedback.

Made by Matt

# Preparation and practical safety

This is a model lesson. It uses prepared cards and drawings. It does not involve culturing cells, collecting tissue, handling blood, treatment decisions or a claimed core practical.

Check large cards and the desk area. Keep loose cards on a mat and pick up fallen items. Provide seated or adult-directed handling where needed. Follow the local risk assessment and individual plans.

Test the offline display, keyboard controls, print choices and reset actions. Keep a static reference available. Use each learner’s usual access equipment.

Destination link: explaining cell structure and interpreting scientific claims supports further biology study and work in laboratory support and biomedical science.

Made by Matt

# Teacher answers and topic guidance

Accept equivalent science in the usual response mode. Keep answers hidden during independent attempts.

## Starter

1. Differentiation.
2. Two daughter cells with matching chromosome sets.
3. From higher to lower concentration overall.

## Sort the case

Better movement is a possible benefit. Possible harmful effects are a risk. Recording harms is a further evidence check.

## Argument chain

The report describes improved movement in the group. Harm results are missing. Consider further research with safeguards. Check harms and use a suitable comparison before recommending routine use.

## Fresh check

Serious harms with a small movement gain weaken support. Learners can qualify or withdraw support if they connect their judgement to the evidence.

## Arrival Supported

1. The first card is Movement.
2. Movement improved in the fictional study.
3. The harm result.
4. Yes.

## Arrival Independent

1. Harms.
2. Improved movement in the group studied.
3. Whether participants experienced harm.
4. Record possible harmful effects.

## Arrival Aspire

1. The third card, Further check.
2. Possible improvement in movement in this group.
3. Harm data were not reported.
4. Compare movement and harms across matched groups.

## Arrival Choice

1. Movement.
2. Movement improved.
3. Harms.
4. Harmful effects.

## Exit Supported

1. Improved movement.
2. Harm results.

## Exit Independent

1. Movement improved in this group. Harms are uncertain.
2. Record possible harms or compare outcomes across groups.

## Exit Aspire

1. Consider further research with safeguards because movement improved, while harms remain uncertain.
2. Serious harm or similar gains without the approach would weaken support.

## Exit Choice

1. Movement improved in this group.
2. Check harms.

Made by Matt

# Mark scheme Supported

Use the actual response and support given. These question tariffs are not participation scores. Award each distinct science point once, up to the stated maximum.

## 1. Sort these phrases as benefit, risk or evidence request: better movement, possible harm, record harms.

Better movement is the benefit. Possible harm is the risk. Record harms is the evidence request.

Maximum 3 marks. Accept equivalent valid wording or a clear model demonstration.

## 2. Complete: Movement improved in the group, but the report gives no information about ___.

Harms or harmful effects.

Maximum 1 marks. Accept equivalent valid wording or a clear model demonstration.

## 3. Choose a next step and give a reason. Check for harms, or use the approach routinely?

Check for harms because the report does not give harm results.

Maximum 2 marks. Accept equivalent valid wording or a clear model demonstration.

Made by Matt

# Mark scheme Independent

Use the actual response and support given. These question tariffs are not participation scores. Award each distinct science point once, up to the stated maximum.

## 1. Write a claim supported by the movement result. Include who was studied.

Movement improved in the group studied. This supports a possible benefit in that group.

Maximum 2 marks. Accept equivalent valid wording or a clear model demonstration.

## 2. Explain why improved movement leaves a question about safety.

Movement was reported. Harmful effects were not reported, so safety is uncertain.

Maximum 2 marks. Accept equivalent valid wording or a clear model demonstration.

## 3. Recommend a next step. Link it to the evidence and the risk gap.

Consider further research because movement improved. Record harms and compare movement across groups before recommending routine use.

Maximum 3 marks. Accept equivalent valid wording or a clear model demonstration.

Made by Matt

# Mark scheme Aspire

Use the actual response and support given. These question tariffs are not participation scores. Award each distinct science point once, up to the stated maximum.

## 1. Explain how a comparison group could change the strength of the benefit claim.

Similar improvement weakens the claim that the approach caused the change. A suitable comparison helps test alternative explanations.

Maximum 2 marks. Accept equivalent valid wording or a clear model demonstration.

## 2. Explain how missing harm results limit the decision, even if movement improved.

Movement data support a possible benefit. Missing harm data prevent a balanced judgement of benefits and risks.

Maximum 2 marks. Accept equivalent valid wording or a clear model demonstration.

## 3. Write a qualified judgement. State what evidence would make you change it.

Consider further research with safeguards. Compare movement and harms. Serious harms or no extra movement gain would weaken support.

Maximum 3 marks. Accept equivalent valid wording or a clear model demonstration.

Made by Matt

# Mark scheme Choice

Use the actual response and support given. These question tariffs are not participation scores. Award each distinct science point once, up to the stated maximum.

## 1. Choose a supported claim: movement improved in this group, or movement improved for everyone. Give a reason.

Movement improved in this group. The report describes only that group.

Maximum 2 marks. Accept equivalent valid wording or a clear model demonstration.

## 2. Choose a limit: no harms were reported, or no harms occurred. Give a reason.

No harms were reported. We cannot tell whether harms occurred.

Maximum 2 marks. Accept equivalent valid wording or a clear model demonstration.

## 3. Choose a next step: check for harms, or recommend routine use. Give a reason.

Check for harms because the movement result alone leaves safety uncertain.

Maximum 2 marks. Accept equivalent valid wording or a clear model demonstration.

Made by Matt

# Science staff guidance

Invite a response, give thinking time and allow a pass. Separate access support from help with the science. Use pointing, sign, drawing, exact scribing or adult-directed handling.

Check the reported benefit and the missing harm results separately. If a claim goes beyond the observation, ask the learner to name what was measured and one further check.

Made by Matt

Science · LAUNCH · Autumn 2 · Week 3 · SCI-LAUNCH-A2-W03-L2

# TA Brief

I can weigh a possible benefit and a risk in a fictional stem-cell case using evidence.

**At check-out, record E for … against the pupil's target.**

The fictional report gives a movement result and leaves harm results out.

Hear one reason during the sort and one limit during the argument chain. Check that the learner distinguishes an unreported harm result from a report of no harm.

Wait, point and rephrase before giving a content cue. Record actual I · S · C beside the task. Use the agreed quiet pause and return to one step.

**Feedback codes** VF · WS · I · NS + … · E · R · // · ?
Give one feedback code. My response is the pupil’s improvement to the work.
Adult checks the response and ticks it, or writes R (Pupil responded to feedback).

**Exit pupil voice**
What helped you most today, or what would you change next time?
Accept a pointed, spoken, signed, drawn, written or chosen response. A pupil may pass.
