

Knowledge Organiser (LAUNCH W2): Two world views side by side

Humanities Aut 1 · 2026–27 · Workbook outcome: Key beliefs across two worldviews.

Key Word	Definition
Modelled:	Modelled: card one says Christians believe there are many gods. I go to the God row, and the Christian column says one God, known in three ways. The error is the phrase many gods; the correction is one God. I did not argue from what I think; I pointed to the row.
Modelled reply:	Modelled reply: the statement says both world views believe God is known in three ways. On the grid, the God row puts that phrase in the Christian column only. So the corrected statement is: Christians believe God is known in three ways; Muslims believe God is one with no equal. Both still believe in one God, and the correction keeps that.

Key Facts

- A key belief is one a world view could not do without. Take it away and the rest stops making sense.
- A statement about a belief can be wrong in one phrase. Spotting that phrase is the skill for today.

Arrival Task

Retrieving what a key belief is

1) A key belief is one a world view could not do without. Take it away and the rest stops making sense.

2) A statement about a belief can be wrong in one phrase. Spotting that phrase is the skill for today.

One wrong phrase

A statement card says: Muslims believe in one God who is known in three ways. Reading A says the card is fine, because both world views believe in one God. Reading B says the card has an error. The phrase known in three ways sits in the Christian column of the grid, not the Muslim one.

We Do 1: Spot the error. Correct the statement.

Card A: both world views believe in many gods. Spot the error, then correct the statement from the God row.

Card B: Muslims believe there is no life after death. What is wrong here, and which row shows it?

Card C: Christians believe God lived on earth as a person, and Muslims believe the same. Spot the error in the second half and correct the statement from the central figure row.

We Do 2: Spot the error in a shared-belief statement

A statement on the board says both world views hold a belief. Everyone writes on a whiteboard whether that belief sits in one column or both, and corrects the statement if it needs it. Then we hold up together and spot the error as a room.

The model

Modelled: card one says Christians believe there are many gods. I go to the God row, and the Christian column says one God, known in three ways. The error is the phrase many gods; the correction is one God. I did not argue from what I think; I pointed to the row.

Modelled reply: the statement says both world views believe God is known in three ways. On the grid, the God row puts that phrase in the Christian column only. So the corrected statement is: Christians believe God is known in three ways; Muslims believe God is one with no equal. Both still believe in one God, and the correction keeps that.

Check yourself

- Check yourself: does every phrase in your corrected statement sit in the right column?
- Check yourself: did you keep the part of the statement that was already true?

From the lesson sheet

Two world views side by side

SoW: 'LAUNCH Weekly - Autumn'!C201 — "Key beliefs across two worldviews."

Learning objective: I can set the key beliefs of two world views side by side. I can spot the error in a statement about them and correct it from the row of the grid that shows why.

No learner is asked what they believe or whether they belong to any faith or none.

Every correction is made from the supplied belief grid, and both world views are treated with the same respect.

Spot-the-error record

Statement → error → row → correction. The row is the argument.

The first row is done for you, from the correction we built together. It is in italics so you know it is not yours.

Exit Ticket – Supported

1) Read one statement, the error and your correction to a partner. They say back which row of the grid you pointed to.

2) Did they point to a different row than the one you meant? Change one phrase. That change is your influence.

3) SPACE stays available, VOICE is received, AUDIENCE names back exactly and INFLUENCE changes one real next action.
