Staff answers and checks

Starter: raw rock and a finished brick are suitable examples. Slate can form thin roof pieces. Food supplies nutrition. Source retrieval locators are Autumn 2 Week 5, Autumn 2 Week 4 and Autumn 1 Week 6. Check actual taught coverage.

Model: A gets three drops, wait one count, then give B three drops and the same wait. The show-me comparison of three versus ten drops is not fair. The source drawing distinguishes water on top, through and at an edge. A drop in the tray may be runoff; do not infer that it passed through the rock.

We do: fill three for B. Sort in source order: Keep the same; Keep the same; Change; Keep the same. Keep drop count, wait and tray alike while changing the rock sample. Different sample sizes introduce a second change.

Step check: A, three drops each. Hinge: A, No. Give each four drops. B ignores unequal amounts; C removes the changed rock; D invents a reason to change water amount. Hear both learners separately. Re-model for an unsure learner, then ask the parallel check.

Staff answers · task, limits and next move

Parallel check: E waits ten counts while F waits two. This is not fair; keep the wait the same. Accept a point, sign, spoken answer or exact scribe with the same science reason.

Practical: predict first. Use two similar-size clean blunt rocks in a stable tray. Give each three drops, wait the same count, inspect the routes and record each actual observation. Keep the blank two-row table blank until the learner observes. No result is assumed.

Supported points to what stays the same and may use three dot counters. Independent plans one fair water check. Aspire repairs unequal sample size, considers edge runoff and fixes two unfair steps. Use like-size samples or state the size limit honestly. Do not claim runoff proves absorption.

Review two rows, give actual VF and one NS(+), and keep the learner’s edit or read-back. Exit names what stayed the same and a next step. Week7 reviews skeletons, nutrition and rocks. A laboratory worker controls the method so results can be compared.

Staff guidance · pair, access and feedback

The pair works with a shared model and individual evidence. One explains and one asks for the clue, then they swap. Hear both independent reasons before moving on. Re-model an unsure learner's step and use a fresh parallel question while the other continues.

No cold calling or forced public reading. A learner may pass. Point, sign, speak, draw, type, write, direct an adult or use exact scribing. Read the task exactly when needed. Keep the science challenge and allow planning in any language. EAL is language, not SEN.

Use a stable tray or large cards and the agreed accessible input. Give processing time. Agree a quiet supervised pause and a brief first–then cue. Re-enter at the last completed step. Do not gather evidence while a learner is distressed.

Record actual VF, WS, I, NS(+), E, R, // and ? only when they occur. Keep deepest adult prompt separate from the pupil response. A real adult receives and names back the science. R requires the pupil's response to an NS(+) next step and real Audience; never award it for a click or completion. Keep the pupil's own wording and own-colour response.

Staff guidance · evidence and handover

Keep each first response, result or labelled explanation, the feedback and the pupil's edit or justified decision to keep it. E requires an observable curriculum action on [SYS]. Use SCI-BUILD-A2-W06 for written, spoken, practical or photographic evidence. Record prompt level, response mode, support faded and what was independent.

At Independent agree actual adult roles and swap across the week. If one adult attends, use the actual staffing plan. Follow individual support and behaviour plans. Record access, regulation and curriculum actions against the learner's own targets without recording a diagnosis as evidence.

If behind, preserve Test two rocks. Record what you see. and the safety teaching. After a secure check shorten repeated oral rehearsal. Record any change, reason and coverage impact. Pass checked understanding, deepest prompt and unresolved errors to Week 7. Do not replace incomplete individual work with a group product.

Evaluation: date taught; delivered as planned; criteria met; actual adaptations and reasons; changes to the scheme and coverage; evidence banked. Source evidence mapping remains [AWARD] [QUAL]; no unit or qualification award is claimed by this lesson.
