

Teesside: Connected World

I can describe and explain different global connections, using map and source evidence with a limitation.

[Open the original interactive lesson](#)

Teacher reports which W9 map-support improvement was adopted, declined or adapted, with the reason.

Standard

Describe Teesside's position using one location and one direction statement.

How can maps and sources show connections without reducing a community to one route or statistic?

Enquiry

CONNECTION IS MORE THAN ONE LINE

One line shows one kind of link. A place has many.

GOODS, PEOPLE, IDEAS AND MESSAGES MOVE DIFFERENTLY

Ships carry goods . Planes carry people . Cables carry messages . Food, music and festivals carry culture .

A ROUTE IS EVIDENCE OF LINK, NOT OF EVERYONE

How can maps and sources show connections without reducing a community to one route or statistic?

A people route says some people moved. It cannot say why, or what every person thinks.

SOURCE + MAP + LIMIT

Every mapped route needs a source, and every claim needs its limit.

How can maps and sources show connections without reducing a community to one route or statistic?

Schematic network with one goods route from Teesside to Rotterdam

Four route types from Teesside

A single people route

How can maps and sources show connections without reducing a community to one route or statistic?

Several routes with a limit note

Model defensible map-and-source reasoning

Watch the decision, evidence and limitation—not just the finished sentence.

1. Locate Teesside and one connected place; name the connection type before explaining it.
2. Use the source precisely: PD Ports describes trade links; Census data describes population categories.
3. Do not use port evidence to claim why a person moved, or census evidence to assume belief or identity.

Connection sorter · what kind of link is this?

Model defensible map-and-source reasoning

Composite cards: each is a typical, labelled example, not a claim about a named person.
Match each to its route type.

Model defensible map-and-source reasoning

- A. Steel and chemicals leave Teesport by ship for Rotterdam
- B. A family moves to Middlesbrough for work in a food factory
- C. A video call from Redcar to a cousin in Mumbai
- D. A Polish bakery opens on Linthorpe Road
- E. Wind-turbine parts arrive on the Tees from Norway
- F. A school in Stockton emails its partner school in Kraków
- G. goods
- H. people

Model defensible map-and-source reasoning

I. messages

J. culture

Choose a card, then its type.

A. Is this claim too big?

Overgeneralised claim to test: “Everyone in Teesside is connected to Poland.” A route line is evidence that SOME connection exists — never proof about every person.

Model defensible map-and-source reasoning

Schematic network with all four route types

Commit before reveal

A port website shows a sea route from Teesport to the Netherlands. What is the strongest claim that evidence supports?

- A. Teesport has a trade/transport connection with a Dutch market or hub.
- B. Everyone in Teesside regularly travels to the Netherlands.
- C. The route explains every cultural connection in Middlesbrough.

Add precision without overclaiming

Compare, qualify, protect variation.

1. Connection chain: located places → route or medium → movement/exchange → local effect → source limitation.
2. The 2021 Census is a population snapshot; country of birth does not reveal an individual's identity, faith or reason for moving.
3. A responsible explanation uses plural language: 'some', 'one source shows', 'may connect', 'does not prove'.

Rehearse the disciplinary move

Teesside connection switchboard

Evidence mix: operator source, official statistics and a clearly fictional composite message. Do not merge their claims.

TEES EUROPE COMPOSITE YOUTH HUB

A. Goods / trade

B. People / population

C. Messages / culture

Switch on one connection. Name the source type and its limit.

Independent Humanities mission

Build a Teesside connection profile using at least two connection types. Add locations, a route/medium, evidence, one possible local effect and a limitation. Use fictional/composite people unless an individual independently opts into a personal route.

EVIDENCE READY

Materials Printed route, named source cards and approved atlas/map as specified.

Access / care Enlarge, chunk, colour-adjust, read exactly or use agreed response mode.
No personal disclosure required.

Independent Humanities mission

Evidence target Decision → map/source action or product → learner explanation; highest prompt recorded.

Supported

Complete two safe connection chains from the approved cards and add one 'does not prove' statement.

_____ connects Teesside to _____ through _____. Source _____ shows _____. It does not prove _____.

Standard

Independent Humanities mission

Explain two different connection types with a mapped route, source reference, local effect and limitation.

Place → connection type → route/medium → evidence → possible effect → limitation.

Stretch

Compare operator, census and community perspectives; judge which claim is best supported and what evidence is missing.

Perspective/scale comparison → strongest claim → counterexample or missing voice → qualified judgement.

Close one loop—do not create a second task

Standard

Explain one connection chain and qualify the claim.

Named audience receipt

“I heard your claim/decision as _____. Your evidence was _____. Your uncertainty/limit was _____.”

Influence: Pupils select one of three already-approved festival case-source sets for first investigation in W11. Teacher checks provenance and reports the selection/boundary at W11.
