

Autumn Science Evidence

Select genuine class records about skeletons, nutrition and rocks, organise them by topic, and add a cautious explanation and evidence limit to each.

[Open the original interactive lesson](#)

Retrieve without guessing

A skeleton record needs a named structure and a supported function.

A nutrition comparison keeps the same label basis visible.

A rock record distinguishes appearance from a controlled property test.

Existing evidence is used honestly; a missing practical is not restaged for a photograph.

Arrival decision: A skeleton record needs a named structure and a supported function.

Existing evidence is used honestly; a missing practical is not restaged for a photograph.

Which existing records best show the Autumn science learning, and what does each record actually support?

Picture first: the same map. Today: pick the records that best show each topic, and be honest about what each one proves.

Which existing records best show the Autumn science learning, and what does each record actually support? A nutrition comparison keeps the same label basis visible.

Checking questions:

- A skeleton record needs a named structure and a supported function.
- A nutrition comparison keeps the same label basis visible.

Which existing records best show the Autumn science learning, and what does each record actually support?

- A rock record distinguishes appearance from a controlled property test.
- Existing evidence is used honestly; a missing practical is not restaged for a photograph.

Which existing records best show the Autumn science learning, and what does each record actually support?

Three autumn topics as a map

An honest autumn science evidence set

What does each record actually support?

Choose a record, then the strongest honest claim about it.

An honest autumn science evidence set

- A. a photo of the sorted vertebrate mat
- B. a scratch table with one row marked “stopped”
- C. the arm model with the contracting muscle labelled
- D. a water bench sketch with no volume written
- E. a photo of the packet fronts (no labels)
- F. fully supports the outcome
- G. supports part of it — name the gap
- H. does not show the science

An honest autumn science evidence set

SELECT choose for a stated reason

CAPTION a short statement tied to the record

LIMIT what the record cannot establish

Take one existing skeleton diagram, one supplied nutrition comparison and one rock observation. For each, retain its label or method, write one caption that says only what is shown, and add a limit. Sort them under the correct topic before choosing the strongest record. A neat page does not strengthen weak evidence, and a photograph without the learner's meaning is not enough.

- A skeleton record needs a named structure and a supported function.

An honest autumn science evidence set

- A nutrition comparison keeps the same label basis visible.
- A rock record distinguishes appearance from a controlled property test.
- Existing evidence is used honestly; a missing practical is not restaged for a photograph.
- Select genuine class records about skeletons, nutrition and rocks, organise them by topic, and add a cautious explanation and evidence limit to each.

Which existing records best show the Autumn science learning, and what does each record actually support?

A rock record distinguishes appearance from a controlled property test. Existing evidence is used honestly; a missing practical is not restaged for a photograph.

An honest autumn science evidence set

Available evidence

A skeleton record needs a named structure and a supported function.

Reasoning move

A nutrition comparison keeps the same label basis visible.

Boundary or next check

Existing evidence is used honestly; a missing practical is not restaged for a photograph.

An honest autumn science evidence set

A skeleton record needs a named structure and a supported function. Existing evidence is used honestly; a missing practical is not restaged for a photograph.

An honest autumn science evidence set decision lab

Supported

Match six supplied records to topic headings and complete one caption frame and limit frame per topic.

Standard

Select and justify two records per topic, then write cautious captions and a method-specific limit.

Stretch

An honest autumn science evidence set decision lab

Evaluate the strength of the selected records, reject one weak item and defend the final evidence set.

Assemble a three-topic evidence page from genuine records already available. Include two records per topic where available, a source or method locator, one bounded caption and one limit. Add a short review naming the strongest record and the record that still needs method detail. If any record is unavailable, leave a marked gap and name the responsible next check instead of recreating the task.

Demand

A rock record distinguishes appearance from a controlled property test.

Truth

Existing evidence is used honestly; a missing practical is not restaged for a photograph.

Exit route remains available: pause, use the print pack, reduce visual density or direct an adult. The named learning demand remains available.

Audience receives; Influence changes one next action

Present one selected record, its caption and its limit. The adult repeats the evidence claim exactly. Confirm or correct it, then retain, relabel or mark the record for an authorised check.

Final check: no result, quote, date, event or pupil wording has been created to make the map look complete. The HTML stores no learner response.
