

Sugar Evidence: Read the Label

BUILD • Science • 40 minutes

I can compare sugar values using the same label basis and order four supplied food labels from least to most sugar.

Name: _____ Date: _____

You may write, type, say, sign, point or direct a partner. An adult can read the words and record your exact response. Keep the choice and explanation your own.

Words for this lesson

Word	Meaning
nutrition label	food information panel
per 100 g	in the same 100 g amount
evidence	the number we read

First idea

Label A says 6 g sugar per 100 g. Label B says 9 g sugar per 100 g. Which first claim can the evidence support?

- A. Label A has less sugar per 100 g than Label B.
- B. Label A is the healthiest food in every way.
- C. The values cannot be compared because every number on a label means something different.

My first idea and reason:

LABEL A • Crunchy Oat Squares	
NUTRITION • per 100 g	
Energy	420 kJ
Fat	1.5 g
of which saturates	0.3 g
Carbohydrate	24 g
of which sugars	6 g
Fibre	3.1 g
Protein	4 g
Salt	0.2 g

Nutrition label A with the of-which-sugars line highlighted: 6 g per 100 g

We do • choose, explain, check

Which comparison is fair using the supplied cards?

- A. Compare 4 g per 100 g with 11 g per 100 g.
- B. Compare 4 g per 100 g with 3 g per serving without converting.
- C. Choose the packet with the picture we like best.

My choice: _____ Evidence or reason:

Same-Basis Sugar Label Lab

Read each supplied card, place the four values in order, then place the method and limitation cards.

Read or hear one card. Choose a group. Give the evidence. A partner checks your reason before you move on. Point or write card numbers; cutting is optional.

Group	Card numbers and evidence
1 • LEAST SUGAR PER 100 g	
2 • NEXT VALUE	
3 • NEXT VALUE	
4 • MOST SUGAR PER 100 g	
FAIR-COMPARISON RULE	
LIMIT OF THE CLAIM	

Activity cards

1 • Label A • 4 g per 100 g	2 • Label B • 9 g per 100 g
The supplied sugar line reads 4 g for each 100 g.	The supplied sugar line reads 9 g for each 100 g.

3 · Label C · 14 g per 100 g

The supplied sugar line reads 14 g for each 100 g.

4 · Label D · 23 g per 100 g

The supplied sugar line reads 23 g for each 100 g.

5 · Same nutrient, unit and basis

Every value is sugar in g per 100 g.

6 · Sugar is one part of nutrition

The cards do not show every nutrient, portion, medical need or the whole diet.

Read the ordered values with units and basis. What claim is supported, and what broader claim is not supported?

Your lesson record

Read and order four supplied label cards from least to most sugar per 100 g, then write or communicate one supported claim and one limitation.

Model helps us see

The matched label cards remove serving-size differences so pupils can see a fair numerical comparison.

Model does not show

The simplified cards show sugar values only. They do not show portion eaten, frequency, other nutrients, allergies, medical needs or a whole dietary pattern.

Supported

Match four large number cards to a number line, then complete: ___ g is least; ___ g is most.

Keep g and per 100 g printed beside every number. Offer two placements at a time and exact scribing.

Standard

Read the four sugar lines, build the table independently and explain one comparison using less/more and per 100 g.

Use: Label ___ has ___ g per 100 g. This is less/more than ___ because ___.

Stretch

Audit a mixed-basis comparison, explain why it is invalid and state what extra information would be needed before a wider nutrition claim.

Distinguish per serving from per 100 g and keep the conclusion within the available evidence.

Evidence target

Four sugar values in correct order with g per 100 g, one evidence sentence and one statement of what the comparison cannot show.

Exit, Audience and evidence • W8A

Supported: Point and complete: ___ g per 100 g is least; ___ g per 100 g is most.

Standard: Give one fair same-basis sugar comparison and state why sugar alone cannot describe the whole food.

Stretch: Explain why mixed per-serving and per-100 g values cannot be ordered directly, then limit the conclusion.

What I said, and what it changed

Next I will _____.

Adult witness note

What was observed, and with what level of independence?

My evidence and explanation

What does this evidence not show?

Visual reference cards

These are diagrams or model views from the uploaded lesson. Use their labels and the card descriptions; they are not photographs of your own results.

LABEL B • Honey Puffs	
NUTRITION · per 100 g	
Energy	1650 kJ
Fat	3 g
of which saturates	1.1 g
Carbohydrate	78 g
of which sugars	9 g
Fibre	2 g
Protein	6 g
Salt	0.8 g

Nutrition label B with the of-which-sugars line highlighted: 9 g per 100 g

6 g
sugars · per 100 g
LABEL A

?

9 g
sugars · per 100 g
LABEL B

Same basis: per 100 g. So we CAN compare the numbers.

Six grams beside nine grams, both per 100 g, with a question mark

LABEL 1 • Berry Bites	
NUTRITION · per 100 g	
Energy	1500 kJ
Fat	12 g
of which saturates	5 g
Carbohydrate	60 g
of which sugars	31 g
Fibre	1.5 g
Protein	5 g
Salt	0.5 g

Tappable nutrition label 1

LABEL 2 • Plain Rice Cakes	
NUTRITION • per 100 g	
Energy	1620 kJ
Fat	2.5 g
of which saturates	0.5 g
Carbohydrate	80 g
of which sugars	0.8 g
Fibre	3 g
Protein	8 g
Salt	0.3 g

Tappable nutrition label 2

Exit • one next step

After the adult has listened, what will you keep, improve or check next?
