

Solar System Presentation: Mission Briefing

I can present researched Solar System findings clearly, credit sources and respond to an audience question with a change or a clear reason plus one transfer step.

Claim and evidence

use evidence

A real audience question

use evidence

One visible response and next

step use evidence

[Open the original interactive lesson](#)

What success looks like

- Present a focused claim supported by accurate facts.
- Make source labels visible or say them aloud.
- Receive an audience question and record a useful change, or explain why the content stays and set a transfer step.

Retrieve and reconnect

- Last lesson: how can another person find the source card for your note?
- Last lesson: explain paraphrase without using the word copy.
- Last week: state one approximately spherical finding accurately.
- Lead-in: what does an audience need in the first 20 seconds?

Which opening would help an audience understand a Solar System briefing? Commit before the model.

Think first. Point, say, sign or write your choice. Give one reason.

- A. 'I found lots of things. Here is every note.'
- B. 'Our question was ___. The evidence shows ___.'
- C. 'Watch this animation first; I will explain the topic later.'

Look closely · what is the evidence?

Open with the question and answer claim.

Use selected evidence and show or say the source.

Pause for the audience question, then record what changes or what transfers next.

Look closely · what is the evidence?

Briefing steps

Briefing steps

Briefing steps

Words we will use

- claim — answer statement
- evidence — facts that support
- audience — real receiver

Watch the model

- State the focused question, then give one answer claim in a complete sentence.
- Select two or three facts that directly support the claim. Show a source label beside each or say the source aloud.
- Use a diagram, paper panel, slide or object only when it helps the audience follow the Science.

Which presentation panel gives the audience the strongest scientific case?

- A. A large title, five animations and no source labels.
 - B. A focused claim, two facts that answer the question, a labelled diagram and source codes.
 - C. A copied paragraph read quickly without explaining the question.
- Commit to an answer. Show the evidence you used. Listen, then revise if needed.

Build the explanation

- Invite one question about meaning, evidence or a limit; silence is not an audience response.
- Repeat the question in your own words, then point to the part of the briefing it checks.
- Make one visible improvement. If the feedback confirms the content is accurate and clear, record why no content change is needed and set one transfer step, such as using the claim with a new audience or less support.

Find and repair the misconception

Presentation glitch: more animation always makes the Science stronger.

A. Keep it: movement proves the facts are accurate.

B. Repair it: use a visual only when it clarifies the claim or evidence; accuracy and sources carry the Science.

C. Repair it: hide source labels to leave more space for effects.

Mission briefing studio

Route each presentation component to its scientific job before the live briefing.

- Choose one presentation component.
- Commit it to claim, evidence or audience response.
- Repair any mismatch by asking what job it performs.
- Freeze a complete chain and rehearse it aloud or through an alternative mode.

Use the numbered cards in your pupil pack. Take turns to choose, justify and check. You may direct a partner to move a card.

Choose a group · defend your placement

- Focused claim
- Evidence and source
- Audience response and next step

Rehearse the claim-evidence-audience chain. State the change, or justify no content change and name one transfer step.

Your independent mission

Deliver a short Solar System briefing to a real audience, receive one question and record either a useful change or a clear no-content-change reason plus one transfer step.

Record: A saved slide, paper panel or witness record; source labels; one audience question; and either a before-and-after change or a clear confirmation plus one transfer step.

Choose your support and challenge

- Supported: Present one claim and two facts with a three-panel frame; receive one choice-based question and change one panel, or mark it confirmed and choose one next audience.
- Standard: Give a one-to-two-minute briefing with claim, evidence and sources, then respond with a visible change or a clear reason plus one transfer step.
- Stretch: Present a justified finding, acknowledge one uncertainty or limit and respond to a probing question with a revision or a defended no-change decision plus transfer.

Show what you know

What did you say, who received it, and what changed? If no content changed, why was that right and what transfers next?

Point to, read or explain the evidence you made. Choose one next step after the adult has listened.
