

Genetic Conditions: Triangulate Source Evidence

LAUNCH • Science • 40 minutes

I can compare school-approved sources, extract evidence relevant to my question, and record agreement, difference and uncertainty without copying or overclaiming.

Prepare before pupils arrive

Print the pupil pack and open Lesson.pptx. Keep the uploaded HTML available for its live controls. Prepare any approved atlas/source extracts, existing learner work, authorised local data or prior planner named in the source lesson.

Prepare the approved local source set and privacy-safe access routes; keep the 1BI0 Foundation decision central.

Keep optional IGCSE depth staff-directed and separate from the core class route; do not use legacy 4SS0 framing.

Staff preview Keep the 1BI0 Foundation explanation, approved local source set, privacy boundary and learner-authored evidence decision central. Optional IGCSE depth remains staff-directed.

Staff qualification / truth boundary Core teaching anchor: Edexcel GCSE Biology 1BI0 Foundation / Combined Science 1SC0 Foundation. IGCSE stretch remains optional for eligible pupils. No diagnosis, advice or personal disclosure. The SoW cell adds no unit, code, criterion or level. This lesson imports none of those as new criteria. Staff-only stretch: eligible pupils may use approved 4BI1/4CH1/4PH1 depth. It never governs the core class route. Legacy 4SS0 framing is not the governing route.

For review or assessment lessons, prepare the centre-approved questions, outcomes and existing learner records. Practice cards and a completed worksheet do not supply missing assessment evidence.

Access and participation

Offer reading aloud, pointing, signing, quiet thinking, a no-touch route and exact scribing where these support the learner. Keep the same subject decision. In shared work, let each learner commit before feedback; use a partner as card mover or checker, then swap. Avoid public speed rankings.

40-minute teaching sequence

Stage / total time	Teaching move	Adult support / response
Arrival • 3 min	Retrieve the W14L1 question. Highlight the key concept, not the name of a person or any personal detail.	Offer private retrieval, pointing and a pass-and-return route; never request personal or family information. Change modality, density or number of choices before increasing prompting.

Stage / total time	Teaching move	Adult support / response
Starter · 3 min	Two sources can both be credible yet emphasise different evidence. Predict one reason: audience, purpose, date, evidence base or scope.	Receive a first decision before feedback; keep it visible for revision. Ask for the source or boundary clue, not confidence or personal experience.
I do · 4 min	Source evidence sorter Choose a note you took, then what it is. Read for the research question; do not copy a whole paragraph.	Model a neutral teacher-approved example; do not invent a learner biography, diagnosis or completed evidence. Name question, evidence, reasoning and limit as separate moves.
We do · 3 min	Classify each note, then decide how the classification changes the wording of the final claim. Established evidence Both approved sources explain the same relevant biology and provide a traceable basis for the bounded statement.	Give private think time before receiving a spoken, pointed or written choice. Ask what evidence or boundary clue changes the claim.
I do 2 · 3 min	Paraphrase accurately and keep the source locator. Use “may”, “can” or a probability statement where evidence is not deterministic.	Keep diagnosis, advice, personal data and unsupported certainty outside the model. Model a repair or an honest hold when the source set cannot answer.
We do 2 · 4 min	1 · Locate Place each paraphrased idea beside publisher, date, purpose and local locator. 2 · Connect Draw a line from each idea to the exact part of the research question it supports.	Let the learner operate or direct the shared source map. Use the explanation to select the lightest independent scaffold.
Independent · 16 min	Complete a two-source evidence matrix for the teacher-approved condition. Record source identity, relevant evidence, agreement, difference, uncertainty and a respectful-language check.	Use least-prompt-first and keep exact-word scribing visibly adult-supported. Capture only genuine learner decisions and meaning; the HTML stores nothing.
Exit · 4 min	Read or show the bounded paragraph privately and name the word or phrase that prevents overclaiming. Agreement Point to the sentence supported by both approved sources and name both locators.	Receive the learner's evidence and limit; do not upgrade either. Name the receiving role and the next report-back point.

The timing belongs to the whole stage. Several PowerPoint slides may share it; do not restart that time on every slide. Full source-stage text is in the PowerPoint speaker notes and original HTML.

Answers, evidence and feedback

Different intended audiences

Useful: different audiences can change explanation depth and vocabulary without making either source automatically false.

Different purpose or evidence base

Useful: a summary and a research report may use different evidence depth and make differently bounded claims.

One page looks more polished

Not enough: visual polish does not establish relevance, evidence or scientific care.

1 • agreement

Agreement: both sources support the same bounded inheritance idea, so it can be stated with both locators.

2 • difference

Difference: one source changes emphasis or scope. Record the difference before deciding whether it affects the claim.

3 • uncertainty

Uncertainty: the source set cannot settle this point. Keep the gap visible and avoid a stronger sentence.

Record the teaching response

What the learner actually showed	Next teaching action
Secure explanation with evidence	Reduce content prompting; offer another example or a limitation.
Partly correct / mixed	Point to the deciding evidence and invite a revision.
Access barrier	Change the reading, sensory or response format; keep the subject decision.
Missing source or observation	Keep the gap visible. Name the source or authorised check needed.

Safety and evidence boundary

Use the centre's authorised practical or fieldwork method and local risk assessment. Supplied sample data, fictional place models, card feedback and rehearsals are teaching material. They are not the learner's practical observations or proof of a qualification outcome. For portfolio use, check the exact registered unit/version, accepted evidence and centre process.

Sources and companion notes

Primary classroom source: [SCI_L_W14L2_Genetic_Condition_Source_Evidence_Explore.html](#)

The uploaded lesson is included unchanged. Text and teaching steps in the PowerPoint are editable; source diagrams are placed images. Word booklets are editable. Static PDFs cannot reproduce HTML controls; use the paper cards/tables or open the original HTML.

Verification scope: matched to the uploaded title, pathway, objective, stage sequence and 40-minute timing. Embedded workbook references are retained as source locators; this is not a new line-by-line audit of every scheme-of-work row or a centre assessment sign-off.
