

Knowledge Organiser (LAUNCH W2): Cause and Consequence of Migration

Humanities Aut 1 · 2026–27 · Workbook outcome: Explain cause & consequence of migration (BHM).

Key Word	Definition
long-term	The diagram above is a causal web rather than a chain: three causes of different speeds converge on one event, and two kinds of consequence diverge from it. The long-term cause is the post-war labour shortage, the short-term cause is the nationality law of 1948, and the trigger, drawn with a dashed border because it is the box most often asserted without evidence, is the advertisement of berths on a particular ship.
short-term	The diagram above is a causal web rather than a chain: three causes of different speeds converge on one event, and two kinds of consequence diverge from it. The long-term cause is the post-war labour shortage, the short-term cause is the nationality law of 1948, and the trigger, drawn with a dashed border because it is the box most often asserted without evidence, is the advertisement of berths on a particular ship.
trigger	The diagram above is a causal web rather than a chain: three causes of different speeds converge on one event, and two kinds of consequence diverge from it. The long-term cause is the post-war labour shortage, the short-term cause is the nationality law of 1948, and the trigger, drawn with a dashed border because it is the box most often asserted without evidence, is the advertisement of berths on a particular ship.
Watch the method:	Watch the method: I take a factor card that says employers in Britain advertised for workers in Caribbean newspapers. I ask how long that condition had been building, and the answer is months rather than years or days, so I place it as a short-term cause; I then ask which event it helps explain, match it to 1948, and read its locator aloud. Speed first, then match, then locator, and only then the next card.
push	The diagram above sorts causes by direction, push factors arising in the place people left and pull factors arising in the place they reached, and beneath the two boxes it draws a scale on which the weight of any cause is measured not by how dramatic it sounds but by the number and quality of the locators that support it.
pull	The diagram above sorts causes by direction, push factors arising in the place people left and pull factors arising in the place they reached, and beneath the two boxes it draws a scale on which the weight of any cause is measured not by how dramatic it sounds but by the number and quality of the locators that support it.
Repairing it together:	Repairing it together: rewrite the sentence as “People came to Britain in 1948 because employers advertised work there and the nationality law confirmed their right to settle,” attaching the locator for each clause; the explanation now weighs exactly what the pack can support.

Key Facts

- A cause is a factor that helps explain why an event happened, and a list of factors becomes an explanation only when the relationships between them are stated and evidenced.
- Consequences fall on the people who moved and on the places they moved to, and a source usually records one of these more fully than the other.

Arrival Task

Retrieving cause, order and evidence

1) A cause is a factor that helps explain why an event happened, and a list of factors becomes an explanation only when the relationships between them are stated and evidenced.

2) Consequences fall on the people who moved and on the places they moved to, and a source usually records one of these more fully than the other.

Why is a list of true facts not yet an explanation?

Consider two answers to the question of why people came to Britain from the Caribbean after 1948. Answer A: “There had been a war. Britain needed workers. The nationality law was passed. A ship sailed.” Answer B: “Post-war Britain faced a labour shortage, so employers and the government invited workers from Commonwealth countries; the nationality law of 1948 confirmed their right to come and settle; and one consequence was that hospitals and transport services were staffed in part by Caribbean workers who formed lasting communities in British cities.”

We Do 1: Sort three cards. Match one to its event.

Card 1: in August 1972 the ruler of Uganda ordered people of Asian heritage to leave the country within ninety days.

Card 2: many of the families expelled from Uganda held British passports issued under earlier nationality law.

Card 3: during the 1970s shops and businesses founded by families from Uganda opened in towns including Leicester.

We Do 2: Match causes to consequences together

We build one explanation on the board before anyone writes: each learner records a single cause card on a whiteboard, marked push or pull and with its speed, and only when every board is raised do we compare and agree the explanation.

Scaffolding – Supported

Word Bank

long-term, short-term, trigger, Watch the method:, push, pull, Repairing it together:, Space, Voice, Audience, Influence

Your route

Sort six cards into cause and consequence and match one cause to its event; an adult may scribe your exact words, which remain yours.

Sentence frames

"Who ... what they do ... so that ..." | "... because ..."

Reference Zone — keep this beside your work

The model

Watch the method: I take a factor card that says employers in Britain advertised for workers in Caribbean newspapers. I ask how long that condition had been building, and the answer is months rather than years or days, so I place it as a short-term cause; I then ask which event it helps explain, match it to 1948, and read its locator aloud. Speed first, then match, then locator, and only then the next card.

Repairing it together: rewrite the sentence as “People came to Britain in 1948 because employers advertised work there and the nationality law confirmed their right to settle,” attaching the locator for each clause; the explanation now weighs exactly what the pack can support.

Check yourself

- Check yourself: does every joining word in your explanation have a locator beside it?
- Check yourself: have you separated consequences for people from consequences for places?

From the lesson sheet

Cause and Consequence of Migration

SoW: 'LAUNCH Weekly - Autumn'!C47 — "Explain cause & consequence of migration (BHM)."

Learning objective: I can sort the causes and consequences of post-war migration by speed and direction, match each to its event, and write a located multi-cause explanation.

No learner is asked about their own family's history. Every task is completed from the supplied factor cards and their printed locators.

The cause and consequence row

Card → long-term, short-term, trigger or consequence → the event it belongs to, with its locator.

The first row is completed for you from the sort we built together and is set in italics so that it is not mistaken for your own; complete as many of the rows below it as you can.

1234

Independent Work – Supported

Six cards sorted and one cause matched.

Sort six cards into cause and consequence and match one cause to its event; an adult may scribe your exact words, which remain yours.

Card (with locator)	Speed or consequence, and direction	Which event, 1948 or 1972?
<i>employers advertised for workers in the Caribbean</i>	<i>short-term cause · pull</i>	<i>1948</i>

Choose a route

1.

I chose my own route.
2.

My explanation is in my own words.
3.

Any adult help is written on the record.

5 · Learner confirmation

I confirm this is my own work.

Learner name (print)	Signature
Date	

Exit Ticket – Supported

1) Read your explanation to a partner or an adult, who repeats the cause they heard in their own words.

2) If the listener heard a consequence where you meant a cause, change the joining word; the change is yours.

3) SPACE stays available, VOICE is received, AUDIENCE names back exactly and INFLUENCE changes one real next action.
