

Eight animal labels

Cut along the table lines, or point to a card without cutting.

Adult may cut the labels or pupils may point/direct. Use body evidence before classifying; do not collect or touch real animals.

Card	Card
Fish	Bird
Frog	Lizard
Mouse	Snail
Crab	Earthworm

Print only the sets you need. Adult preparation is an alternative to pupil cutting. These are original teaching labels and simplified models.

Animal classification headings

Cut along the table lines, or point to a card without cutting.

Place above two paper sorting areas. Match by presence or absence of an internal backbone.

Card	Card
VERTEBRATE — has a backbone	INVERTEBRATE — no backbone
UNSURE — need body evidence	

Print only the sets you need. Adult preparation is an alternative to pupil cutting. These are original teaching labels and simplified models.

Monday animal evidence

Cut along the table lines, or point to a card without cutting.

These clues are a reference for the labels. Keep the clue available; no pupil has to infer hidden anatomy from appearance.

Card	Card
Fish Internal bones include a backbone.	Bird Internal bones include a backbone.
Frog Internal bones include a backbone.	Lizard Internal bones include a backbone.
Mouse Internal bones include a backbone.	Snail Has a shell, but no backbone.
Crab Has a hard outer case, but no backbone.	Earthworm Muscles act against fluid inside. Skin rings are not an internal backbone.

Print only the sets you need. Adult preparation is an alternative to pupil cutting. These are original teaching labels and simplified models.

New case labels

Cut along the table lines, or point to a card without cutting.

Use for the additional Monday sort and Wednesday body-evidence investigation.

Card	Card
Bat	Snake
Jellyfish	Goldfish
Beetle	

Print only the sets you need. Adult preparation is an alternative to pupil cutting. These are original teaching labels and simplified models.

Wednesday case-clue cards

Cut along the table lines, or point to a card without cutting.

Cover each body clue first, make a prediction or choose unsure, then reveal the clue. These are original paper teaching cases.

Card	Card
Goldfish Its internal bones include a backbone.	Bat It has wings and an internal backbone.
Beetle Its hard outer case supports the body. It has no backbone.	Earthworm Muscles act against fluid inside. The rings on its skin are not bones.
Snake It has no legs, but has an internal backbone.	Jellyfish It has no internal backbone.

Print only the sets you need. Adult preparation is an alternative to pupil cutting. These are original teaching labels and simplified models.

Mystery-card blanks

Cut along the table lines, or point to a card without cutting.

Adult can copy or scribe. Choose one animal; keep its name hidden while the body clues are checked.

Card	Card
Hidden animal: _____	Body clue 1: _____
Body clue 2: _____	My improved clue: _____

Print only the sets you need. Adult preparation is an alternative to pupil cutting. These are original teaching labels and simplified models.
