

Two-chain organism labels

Cut along the table lines, or point to a card without cutting.

Use paper models only. Leaves represent part of a green producer plant. Real animals can have other food sources.

Card	Card
Grass	Rabbit
Fox	Leaves
Caterpillar	Robin

Print only the sets you need. Adult preparation is an alternative to pupil cutting. These are original teaching labels and simplified models.

Chain arrows and role labels

Cut along the table lines, or point to a card without cutting.

Arrows go from food to the eater; they show food and energy passing. Adult may cut four arrows, or pupils may draw/direct them.

Card	Card
	
	
PRODUCER	PRODUCER
CONSUMER	CONSUMER
CONSUMER	CONSUMER

Print only the sets you need. Adult preparation is an alternative to pupil cutting. These are original teaching labels and simplified models.

Feeding evidence

Cut along the table lines, or point to a card without cutting.

Read each clue before arranging arrows. The links are examples rather than complete diets.

Card	Card
Grass / rabbit / fox A rabbit can eat grass. A fox can eat a rabbit.	Leaves / caterpillar / robin A caterpillar can eat leaves. A robin can eat a caterpillar.

Print only the sets you need. Adult preparation is an alternative to pupil cutting. These are original teaching labels and simplified models.

Model-change prompt

Cut along the table lines, or point to a card without cutting.

Use an opaque paper cover over the plant card. This is a hypothetical change, not a real experiment or measured result.

Card	Card
Less plant food is available Who may lose a food source first? What could change later? What other food links or conditions are missing?	

Print only the sets you need. Adult preparation is an alternative to pupil cutting. These are original teaching labels and simplified models.
