Show what you know with a model and explain one reason.

Check today’s success:

I can name a possible benefit and risk.

I can ask for evidence that tests a claim.

I can justify further research without claiming a cure.

What am I learning? I am learning to weigh a possible benefit and risk of stem-cell research using evidence.

My feedback was … Name what you heard at Review.

Next I need to … Add one precise piece of benefit or safety evidence you would request before deciding.

How I know: I can name a possible benefit and risk, then request evidence before recommending a next step.

Your teacher hears your answer and uses it to choose our next model, prompt or example.

My confidence: □ I need help □ I can try □ I can explain

I do · words

Watch the full model. Point to the step that answers today's question.

Word	Meaning	Example
stem cell	a cell that can divide and form specialised cell types	Stem cells are being studied for possible medical uses.
benefit	a possible helpful result	A possible benefit would be replacing damaged cells.
risk	a possible harmful result or uncertain effect	A study must consider a risk to volunteers.
evidence	information that tests or supports a claim	The trial needs evidence of both benefit and harm.

We do · match the statements

Which panel statement is not based on evidence? Choose it, then state the better question.

Word bank, in source order:

evidence request

possible benefit

possible harm

unsupported assertion

Statement	Your match
The trial records how much damaged tissue changes.	Choose from the word bank.
A treatment may help a damaged tissue.	Choose from the word bank.
It must work because many people want it.	Choose from the word bank.
A study could find a harmful effect.	Choose from the word bank.

Match all four statements. Then explain your choice for the statement not based on evidence.

We do 2 · hinge

Choose one hinge answer. Both learners show their answer at the same time.

A new fictional cell study reports improved movement but does not report harmful effects. Which review is justified?

A. The benefit can establish safety despite the missing report on harms.

B. The missing report proves the study cannot have produced any benefit.

C. The improved movement proves the study will work for every person.

D. The benefit needs checking alongside missing risk evidence before a decision.

Show one answer to the adult. Point or use a card, too. Then explain to your partner. You may pass on speaking.
