DNA, genes and chromosomes

Today I can… I can label DNA, a gene and a chromosome in a simple model. I can explain that a gene is a section of DNA with a protein instruction. I can distinguish one chromosome from the genome.

Feedback: □ VF □ WS □ I □ NS □ E □ R □ [//] □ [?] _____

Arrival · Supported

Look at this week's string-and-clip DNA model. Point to one detail you notice.

The genome is the full DNA set; a chromosome carries part of it; a gene is a section of DNA on a chromosome. Nested view; not to scale.

1. What does your model show, and why?

Show what you know with a model and explain one reason.

My learning: I am learning to show how a gene is part of DNA and how DNA is packed into chromosomes.

How I know: I can show a gene within DNA, DNA packaged in a chromosome, and the genome as all DNA.

2. What feedback did you hear, and what is your next step?

My feedback was … Name what you heard at Review.

Next I need to … Use “section of DNA” and “codes for a protein” precisely in one sentence.

Check today’s success:

I can label DNA, a gene and a chromosome in a simple model.

I can explain that a gene is a section of DNA with a protein instruction.

I can distinguish one chromosome from the genome.

Your teacher hears your answer and uses it to choose our next model, prompt or example.
