Teacher and cover plan

1. Outcome. Explain the roles of extraction steps and distinguish an observation of a crude extract from a claim about purity. Weekly line C42: Describe DNA, genes & chromosomes.

2. Arrival. Four current source questions per selected route: detergent/membranes, filter/debris, observation, adult ethanol. Do not assume previous completion.

3. Starter. Three source choices, second correct. Take a first response before evidence; no speed ranking.

4. I do. Use all four extraction views/captions or optional32second silent captioned clip within4minutes; keep transcript/static models. Define release/filter/precipitate and crude-extract limit.

5. We do. Sort all six source cards with reasons and clues; optional real help request. Worked clear-filtrate example has four steps. Use classroom observation or clearly labelled fictional table, never merged.

6. You do. Each chooses one route; method roles, own observation/interpretation and limit. Aspire compares visible-yield conditions. Review/refine within14minutes, not extra.

7. Routes. Supported step cards and sentence frames; Independent release/debris/precipitate plus precise evidence label; Aspire fruitmass/volumes/mixing/timing/purity fair-comparison question. Alternatives, not fixed labels.

8. Access. Point/say/sign/draw/write/type/exactscribe/direct adult, thinking time/private ask/pass; no forced touch, disclosure, extra form or public ranking.

9. TA role. Switch chooser/questioner then speaker/listener, retain separate evidence. Use held five-step staff ladder; teacher genuinely receives each response.

10. Exit. Two questions each route; detergent role and purity limit, or Aspire fair yield comparison. Give one science next move after hearing each own answer.

11. Evaluation. Record actual/supplied route, explanation and limit, support used/faded, change after feedback and next teaching step.

Teacher and cover plan continued

12. Kit, safety, evidence and timing

Kit. Books/pencils, six step/evidence cards, model sequence, organiser and fictional table. Staff-approved non-core practical only: adult-prepared soft fruit/solutions, sealedbag, filter/mesh, cleartube, cold ethanol/tray. Staff choose concentrations/quantities; this pack adds none.

Safety. Teacher/technician approves local method, chemical risk assessment, PPE and disposal. Adult controls all liquids and ethanol. No pupil direct contact/tasting; no human samples/mouth pipetting. Check allergies privately. No flames/sparks/heat. Staff handle spills/disposal; wash hands. Supplied-observation route is equal.

Evidence. Each keeps orderedmethod/roles, labelled actual or supplied observation, cautious crude-extract interpretation, one limit/comparison and both exit answers. No purity/true-yield/molecularproof; visible genes/base sequence/double helix cannot be seen. Water comparison does not identify all components.

0–4Arrival;4–7Starter;7–11I do;11–15We do;15–18I do2;18–22We do2;22–36Independent including review/refine;36–40Exit. Total40. Optional32sclip replaces modelling time. Reference pages are alternatives within a stage, not additional timed tasks.

Pair. Two learners alternate chooser/questioner and speaker/listener; own evidence, real audience and one named next move. Scribe exact meaning; keep access support separate from content prompts.
