Staff answers · retrieval and model

Starter: a Punnett square shows possible allele pairs and their chances; a gene is a section of DNA with instructions for a product; chromosomes are in the nucleus of an animal cell. Check actual coverage before assuming recall.

Model: F/f × F/f gives FF, Ff, fF, ff. fF and Ff are the same carrier genotype. The condition chance is 25% for each pregnancy in this model, not an exact family count.

Show-me: inherited. Infection precautions remain a separate health matter. Missing words: inherited; CFTR; carrier; NHS or named source A/B.

Sort: What it is; Inheritance; Care; Source. Hinge C. A confuses genetic inheritance with an infection; B invents a cause; D invents water-borne transfer. Hear both pupils separately. Re-model the unsure step and use a fresh question: does one changed copy prove the person has CF? No; this usually describes a carrier.

All routes retain three sourced facts and one repair. Supported can point/direct an exact scribe. Independent distinguishes inherited cause from infection. Aspire removes unsupported personal certainty. Deeper: inherited variants do not spread by touch; general sources do not fix each person’s symptoms or future.

Each exit needs a source-linked fact, a model reason, actual feedback and a next step. A click alone does not show understanding.

Staff guidance · pair, access and feedback

The pair works with a shared model and individual evidence. One explains and one asks for the clue, then they swap. Hear both independent reasons before moving on. Re-model an unsure learner's step and use a fresh parallel question while the other continues.

No cold calling or forced public reading. A learner may pass. Point, sign, speak, draw, type, write, direct an adult or use exact scribing. Read the task exactly when needed. Keep the science challenge and allow planning in any language. EAL is language, not SEN.

Use a stable tray or large cards and the agreed accessible input. Give processing time. Agree a quiet supervised pause and a brief first–then cue. Re-enter at the last completed step. Do not gather evidence while a learner is distressed.

Record actual VF, WS, I, NS(+), E, R, // and ? only when they occur. Keep deepest adult prompt separate from the pupil response. A real adult receives and names back the science. R requires the pupil's response to an NS(+) next step and real Audience; never award it for a click or completion. Keep the pupil's own wording and own-colour response.

Staff guidance · evidence and handover

Keep each first response, result or labelled explanation, the feedback and the pupil's edit or justified decision to keep it. E requires an observable curriculum action on [SYS]. Use SCI-LAUNCH-A2-W06 for written, spoken, practical or photographic evidence. Record prompt level, response mode, support faded and what was independent.

At Independent agree actual adult roles and swap across the week. If one adult attends, use the actual staffing plan. Follow individual support and behaviour plans. Record access, regulation and curriculum actions against the learner's own targets without recording a diagnosis as evidence.

If behind, preserve each source-linked claim, each learner's response and the safety teaching. After a secure check shorten repeated oral rehearsal. Record any change, reason and coverage impact. Pass checked understanding, deepest prompt and unresolved errors to Week 7. Do not replace incomplete individual work with a group product.

Evaluation: date taught; delivered as planned; criteria met; actual adaptations and reasons; changes to the scheme and coverage; evidence banked. Source evidence mapping remains [AWARD] [QUAL]; no unit or qualification award is claimed by this lesson.

Staff · sources and lesson scope

Weekly outcome: Research a genetic condition online; present.

Exact goal: I am learning to use a named source to present careful facts about a genetic condition.

Source: Launch/Autumn_2_2026-27/SCI_LAUNCH_A2_W06/SCI_LAUNCH_A2_W06.html; revision c4ca8ffab98e6186a9ef2fed3921644b177f0d6d.

Workbook: _authoring/science_2026-27/_toolchain/scheme_references/LAUNCH_SOW.xlsx; LAUNCH Weekly - Autumn B44 Aut2·W6; C44 above.

The workbook says online. Preserve the accepted prepared offline source-card route; teacher-opened full sources are optional, with no automatic external loads and no pupil phone required.

Source A: NHS, Cystic fibrosis. https://www.nhs.uk/conditions/cystic-fibrosis/

Source B: NHS Genomics Education, Cystic fibrosis. https://www.genomicseducation.hee.nhs.uk/genotes/knowledge-hub/cystic-fibrosis/

Both pages checked 24 October 2026. Use the source cards for classroom access, with the full source for checking. Do not diagnose or invite personal medical disclosure.

The two NHS sources serve different audiences and are not fully independent. Current Source A does not explicitly state the salt/water mechanism; the classroom card does not attribute that sentence to it.

No [AWARD] or [QUAL] assessment alignment is newly asserted. Career link: a genetic counsellor explains chances and limits with care.
