Source A · NHS public information

I can name the condition and source.

I can explain CFTR inheritance without personal details.

I can tell a sourced fact from a guess.

Cystic fibrosis is inherited. Altered gene copies from both parents cause thick, sticky mucus. This can affect the lungs and digestion. Treatments can help ease symptoms. Care depends on the person.

This source gives a public overview. It does not tell us one person’s exact symptoms or future.

Publisher: NHS. Title: Cystic fibrosis. Use the Causes, Symptoms and Treatments sections.

Source A full page: ask an adult to use the link in the page tools or staff notes.

Accessed 24 October 2026. Page reviewed 28 February 2025. This is a classroom paraphrase, not a quotation. The full page can be opened by the teacher.

Source B · NHS Genomics Education

I can name the condition and source.

I can explain CFTR inheritance without personal details.

I can tell a sourced fact from a guess.

Cystic fibrosis usually involves harmful variants in both copies of CFTR. This is an autosomal recessive condition. A carrier has one changed copy in this model. The effects can vary.

Two carrier parents: each pregnancy	Model chance
Child has the condition	1 in 4 = 25%
Child is a carrier	2 in 4 = 50%
Child inherits neither changed copy	1 in 4 = 25%

These chances apply each time. They do not predict a set family count or the severity of one person’s symptoms.

NHS Genomics Education Programme. Page: Cystic fibrosis. Read Genomics, then Inheritance and genomic counselling. Use these parts to check the gene and how changed copies pass to a child.

Source B full page: ask an adult to use the link in the page tools or staff notes.

Checked 24 October 2026. This card uses our own words. It is not a quote. We have not given a review date for this source.

Sources · purpose and limits

I can name the condition and source.

I can explain CFTR inheritance without personal details.

I can tell a sourced fact from a guess.

Both sources are NHS sources. They have different readers and are not wholly independent publishers.

Source A	Source B
Public information about effects and care	More detail about genes and inheritance

Both support inherited cause. More detail does not by itself mean a conflict. Check the actual claim, source section, date and purpose.

Read the source, cover it, explain the meaning in your own words, then check it. Keep the source label beside each claim.

Use fictional cases. Do not ask for family details or predict a person’s future. Inheritance and infection precautions are separate matters.

Arrival

I can name the condition and source.

I can explain CFTR inheritance without personal details.

I can tell a sourced fact from a guess.

Look at the NHS source card. Point to one detail you notice.

Cystic fibrosis is inherited. It can affect breathing and digestion. Changed CFTR copies come from both parents. One changed copy usually means a carrier. Treatments can ease symptoms.

Source A and Source B are named in the pack. The genetic cause is inherited. Infection precautions are separate. This card predicts nothing about a person.

Point, sign, speak, draw, type or write. You may pass or pause. An adult can read or scribe your exact words. Plan in any language.

Independent · Independent

I can name the condition and source.

I can explain CFTR inheritance without personal details.

I can tell a sourced fact from a guess.

Present three sourced facts from the offline NHS card, then correct an unsupported claim.

Explain CFTR inheritance and separate it from infection.

The CFTR change is inherited because ___. Infection advice is separate because ___.

Say it before you write. You may use any language to plan. Keep your own response.

Choose one route for the full 8 minutes. The one-minute reset is inside this time.
