Arrival

I can order copy, separate and split for mitosis.

I can mark one gene as part of DNA.

I can use a simple cross as probability, not a promise.

Look at the cell and allele models. Point to one detail you notice.

Point, sign, speak, draw, type or write. An adult may read or scribe your exact words. You may pass or take an agreed pause. Plan in any language.

Independent · Independent

I can order copy, separate and split for mitosis.

I can mark one gene as part of DNA.

I can use a simple cross as probability, not a promise.

Complete a short three-part check: order copy/separate/split, mark a gene on DNA, and use Aa × aa to state a possible pair and chance.

Explain matching body cells and why a gene is only part of DNA.

The model shows ___ because ___.

Use the blank check sheet. Put the rehearsal model away. Work on your own for the full 8 minutes. Keep your first response.

My own check · cells and DNA

I can order copy, separate and split for mitosis.

I can mark one gene as part of DNA.

I can use a simple cross as probability, not a promise.

1. Put these stages in order: Split / Copy / Separate. Explain what each step does.

My order and reason: _____

2. Mark one short part of the DNA string as a gene in this simple model. Explain your mark.

DNA string model
A T C G G T A T C G

This short string is a model, not a real gene sequence.

My explanation: _____

My own check · a chance

I can order copy, separate and split for mitosis.

I can mark one gene as part of DNA.

I can use a simple cross as probability, not a promise.

3. Use Aa × aa. Label the top and side, fill each box, then give one possible pair and its chance.

Side / top	_____	_____
_____	_____	_____
_____	_____	_____

My possible pair and chance: _____

Does this promise an exact family count? My reason: _____

This is an invented one-gene model. Keep personal and family details private.

Exit

I can order copy, separate and split for mitosis.

I can mark one gene as part of DNA.

I can use a simple cross as probability, not a promise.

Show one correct model detail and explain how it supports your answer.

My feedback was: _____

Next I need to: _____

Choose one model error to repair and explain in the next lesson.
