

SCI_BUILD_A2_W07 · BUILD Science teacher note

Staff-facing; review only. Verbatim SoW objective: Review and evidence learning on skeletons, nutrition & rocks (Entry Level Science / UAS).

Source: BUILD scheme of work, Autumn 2 week 7. Pupil goal: I am learning to show a fact about bodies, food and rocks.

40-minute sequence and success

Arrival 5 · Starter 3 · I do 5 · We do 7 · We do 2 5 · Independent 8 · Review 4 · Exit 3 = 40.

One-minute resets are inside We do 2, Review and Exit. Success: I can show one fact., I can show what I used to find it., I can name one next step.

Retrieval and I-do check

When	Question	Answer	SoW cell
last lesson	What stays the same in a fair water test?	The drops and waiting time.	BUILD scheme of work, Autumn 2 week 6
2-4 weeks	Is a finished brick raw or made?	It is human-made.	BUILD scheme of work, Autumn 2 week 5
last term	Where do animals get food?	From what they eat.	BUILD scheme of work, Autumn 1 week 7

Autumn 1 is the prior half-term. Confirm actual taught coverage before using a retrieval question. Show me: Which object can show a fact about a rock: a safe sample or a food picture? Answer: A safe rock sample. All pupils show by point, card or board.

Words (same as page and organiser):

Word	Tier	Simple definition	Example sentence
skeleton	Tier 3	bones that help hold a body up	I point to the bone model.
nutrition	Tier 3	what a body gets from food to grow and stay well	An animal gets nutrition from food.
rock	Tier 3	a solid thing from the ground	I can test a safe rock.
evidence	Tier 3	what you saw or did that helps show a claim	My rock sort shows my rule.

Faded example, tiered task and stretch

I do full: "I point to the bone model. It shows a skeleton. The bones help hold the body up." We do part-done: "I point to a safe rock. I felt a rough side. My fact is ." Removed step: Use the real observation to state a fact about the rock. Independent: no filled step. Next fade: Show only an object; pupil chooses the question, evidence and fact.

We do F: Point to one model. What can it show? M: Match one fact to the model or action that supports it. H: Which fact needs a new check rather than a card? Independent F: Show one fact about a body or rock. M: Show two facts. Tell how you found one. H: Pick your best real evidence. Why does it fit? Go deeper: Pick a claim you cannot show. What could you check? Named harder

stretch — Evidence judge: Pick the best real result. Why does it fit?

The kit route is hands-on or sensory: model skeleton or bone card, food-group pictures, clean safe rock. Two on-screen interactions are card sort and What best backs a claim about a rock surface?; native keyboard controls, live feedback, no storage. The diagram is original and simplified, not to scale. Its labels are checked in the facts ledger.

Hinge and decision

Question: A class claims a clean plastic lid floats. Which evidence could check the claim?

Option	Correct?	Diagnosis
A photo of a different lid.	no	A different item is not direct evidence for this lid.
A guess from the lid colour.	no	Colour alone does not test floating.
A card about another rock.	no	Evidence about another item misses the claim.
A safe water test of that lid.	yes	Selects a direct safe observation of the claimed behaviour.

Rule: About 3 in 4 or more right → move on; otherwise re-model I point to the bone model. It shows a skeleton. The bones help hold the body up. Ask the parallel hinge. No scores or answers saved.

Parallel hinge: A pupil claims a toy rolls farther on a smooth mat. What evidence could check it? Compare measured rolls from the same start on two mats.

Misconceptions:

Misconception	Spot	Correct
A picture is proof of a rock hardness result.	Offers a food or generic rock picture as a test result.	Use an actual safe sample or genuine recorded result from a completed test.
A skeleton model and a rock sample answer the same question.	Uses one item for every claim.	Match each question to a relevant model or observation.

Feedback codes: VF · WS · I · NS(+) · E · R · // · ? At We do 2, record WS or I and actual prompt level; at Review, VF and specific NS(+); at Exit, one self-edit // or read back ? R means a response to the next step heard by an adult in the next lesson, never auto-awarded. E: evidence captured on the school's evidence app only if an observable curriculum action occurred, never while distressed. The page stores no response. Pathways: high support with VF/WS; Build: mix of WS/I; Grow: mostly I and self-edit; Launch: independent self-assessment.

Planned adaptations

Broad area	EEF five-a-day strategy	Specific support
Cognition & Learning	scaffolding	Give a three-step visual card for show what we know about bodies and rocks; remove its last cue after a correct try.
Communication & Interaction	explicit instruction	Point to the real kit before a short spoken, signed or AAC response; wait for a turn.
SEMH	cognitive/metacognitive strategies	Offer a private first-then cue and planned pause before the hinge; re-enter with one step.

Broad area	EEF five-a-day strategy	Specific support
Sensory/Physical	technology	Use a stable tray, large cards or an accessible input; no forced touch.
EAL (language, not SEN)	flexible grouping	Rehearse a full M or H idea in any language before writing; keep the science challenge.

Keep M/H challenge open for EAL with the same words and home-language planning. Pupil may point, sign, speak, draw, type, write, use a scribe or have a staff-captured photo. Offer speech-to-text, TTS or immersive reader on the staff device.

Adults, regulation and prompt ladder

Wait and count to 5. → Point to the object or model. → Ask: What will you check next? → Model one step and give the next turn back. → Finish one example together, then let the pupil try. No physical prompt. Stage scripts: I do “Watch my first step. What do you see?”; We do “What step is missing? Show it with the kit.”; Independent “What can you do first on your own?”. At Independent, one adult works with supported pupils, the other holds the group; choose roles at the start and swap across the week. If only one adult attends, use the actual staffing plan. At Exit, hand off the deepest prompt level and what was independent.

Cold-call / invite bank, answers:

- F: Point to a bone model. → The bone model or card; What is a skeleton? → Bones that help hold a body up.

- M: What can show a fact about a rock? → A safe rock sample or real result from a completed test; What does evidence mean? → What you saw or did to support a claim.

- H: Which claim needs a fresh check? → A claim about a result no one has observed or recorded; Why cannot a card prove hardness? → It labels an idea but is not a test on that particular sample.

Regulation: Agree a quiet pause and supervised place. Give one short cue. Re-enter at the last completed step. No evidence while distressed.

Lesson record: BUILD_SCI_A2_W07 via staff device or projector only. Gatsby 4: A technician chooses evidence that answers the question being checked.

Reading gate: BUILD below age 8; rough ARI grade 1.02 on 644 pupil-visible words (adult guidance and navigation excluded); heuristic age guide 7.02 years, not a formal reading-age test. This is a rough screen, not an individual assessment.

Prepared model handling · practical safety

Kit: Clean adult-checked model or rock, matching fact cards, tray

Method: Choose one checked model or sample and match an observed fact to it.

Pupil Risk: A loose or rough model part could scratch or fall.

Pupil Safe: Use checked blunt models on a tray. Keep small parts together and wash hands after shared kit.

Staff confirm the local school risk assessment and exact kit; this does not assert a SoW core practical.

SLT planning and evaluation

Lesson code: SCI-BUILD-A2-W07

SoW reference: BUILD scheme of work, Autumn 2 week 7

Exact SoW outcome: Review and evidence learning on skeletons, nutrition & rocks (Entry Level Science / UAS).

Evidence (scheme of work): Pearson Entry Level Science 8939 (E1→E3 intro); AQA UAS science units. F: working-scientifically observation & results tables. S: end-of-unit assessment + Entry Level / UAS evidence.

Evidence in this lesson: Pearson Entry Level Science 8939 (E1→E3 intro); AQA UAS science units. F: working-scientifically observation & results tables. S: end-of-unit assessment + Entry Level / UAS evidence.

Where it shows in books: Independent observation/result table or labelled explanation; review edits and exit response beside the original work.

Label evidence on the school's evidence app with this code: SCI-BUILD-A2-W07. For spoken, practical or photographic evidence, record the same code with the evidence.

Arrival (5 min): Pick a safe model or card to look at. Staff: Offer a safe kit choice and short first-then cue.

Starter (3 min): Think back. Say, sign or point. Staff: Ask three low-stakes prior questions; answers in note.

I Do (5 min): Watch one fact with one clue. Staff: Pre-teach words; show the full model; ask the show-me check.

We Do (7 min): Match a real model to a fact. Staff: Hand over the missing step; offer F or H route. Reset once.

We Do 2 (5 min): Choose one answer. All of us show it. Staff: Take all pupil responses at once; use decision rule and parallel hinge.

Independent (8 min): Show work you did about body, food or rock. Staff: Choose one adult for supported pupils, one for group; swap across the week.

Review (4 min): Hear one next step. Fix a part if you can. Staff: Give VF and one NS(+); invite one self-edit. Reset once.

Exit (3 min): Tell an adult what you know and how. Staff: Hear feedback and next step, choose next start, then one-minute reset.

Planned adaptation — cognition learning: Give a three-step visual card for show what we know about bodies and rocks; remove its last cue after a correct try.

Planned adaptation — communication interaction: Point to the real kit before a short spoken, signed or AAC response; wait for a turn.

Planned adaptation — semh: Offer a private first-then cue and planned pause before the hinge; re-enter with one step.

Planned adaptation — sensory physical: Use a stable tray, large cards or an accessible input; no forced touch.

Planned adaptation — eal: Rehearse a full M or H idea in any language before writing; keep the science challenge.

Planned adaptation — eef strategy: cognition learning: scaffolding; communication interaction: explicit instruction; semh: cognitive/metacognitive strategies; sensory physical: technology; eal: flexible grouping

Staff: confirm the planned adaptations actually used and record any changes below.

If behind — must teach core: Show work you did about body, food or rock. Preserve the individual evidence required above.

If behind — shorten or merge: After a secure hinge, shorten repeated oral rehearsal. If needed, merge the exit reflection into the Arrival of Spring 1 W01. Keep the core evidence and any safety teaching; record the change and coverage impact.

If behind — next lesson: Spring 1 W01: Describe how fossils are formed over a very long time (Mary Anning).

If behind — dependency: Pass on today's checked understanding and unresolved hinge errors for the next starter. Do not replace incomplete individual work with a group product.

Staff evaluation — date taught:

Staff evaluation — delivered as planned: ☐ Yes ☐ Partly ☐ No

Staff evaluation — criteria met: ☐ All ☐ Most ☐ Some

Staff evaluation — adaptations made and why:

Staff evaluation — change from sow reason and coverage impact:

Staff evaluation — evidence banked on the school's evidence app:

Individual target opportunities

Cognition & learning: We do: Use the real observation to state a fact about the rock. Record the pupil's own sequencing, attention or independence target, including the prompt level needed.

Communication & interaction: Check: respond to "A class claims a clean plastic lid floats. Which evidence could check the claim?" in the pupil's agreed mode. Evidence an individual communication/turn-taking target without requiring speech.

SEMH: Arrival: Pick a safe model or card to look at. Use the agreed predictable start or pause/re-entry plan; evidence the pupil's own regulation or engagement target privately.

Sensory/physical: Independent: Show work you did about body, food or rock. Offer the agreed accessible input, enlarged material or adapted equipment; record the pupil's target-related access/independence, not a diagnosis.

EAL: Model/shared rehearsal: use skeleton, nutrition, rock, evidence with the actual example; allow first-language planning and oral rehearsal before the independent response. Record the agreed language target; EAL is not SEN.

Capture E against the pupil's own IEDP target on the school's evidence app; the IEDP carries their EHCP-linked and Boxall targets, so one record serves every plan. Follow the pupil's IBSP where it differs from these routines.
