

Why day turns to night

Today I can... ☐ I can point to the day and night sides. ☐ I can turn the model and explain when night comes. ☐ I can explain why the Sun seems to move.

Feedback: ☐ VF ☐ WS ☐ I ☐ NS ☐ E ☐ R _____

Arrival

Place a dot on the ball. Point to the side lit by the torch.

My response

Starter

Think back. Say, point or write one answer for each question.

1. What goes around Earth?

2. Name one mechanism from our forces work.

3. Name one force from our first science week.

Why day turns to night

Today I can... ☐ I can point to the day and night sides. ☐ I can turn the model and explain when night comes. ☐ I can explain why the Sun seems to move.

Feedback: ☐ VF ☐ WS ☐ I ☐ NS ☐ E ☐ R _____

Talk-then-sort

Now try the same model. Two steps are done. Complete the last step: turn the dot away and name what comes next.

Torch still → dot faces the torch: day → turn the ball → dot faces away: _____.

Choices: day · night

Card or step	My group or match
The missing word is	

Show day and night at the dot. Explain why the Sun seems to move, even when our torch stays still.

Independent F

Point to the lit side and the dark side.

I point to ____ for day and ____ for night.

My response

Independent M

Explain what the dot sees as Earth turns.

The dot has night when ____ because ____.

My response

Why day turns to night

Today I can... ☐ I can point to the day and night sides. ☐ I can turn the model and explain when night comes. ☐ I can explain why the Sun seems to move.

Feedback: ☐ VF ☐ WS ☐ I ☐ NS ☐ E ☐ R _____

Independent H

Explain why the Sun seems to move across our sky while the model torch stays still.

The Sun seems to move because _____. The model shows _____.

My response

Go deeper

Mark two dots on opposite sides. Explain why one has day while the other has night.

My response

Two dots, one turn: test the claim that the Sun goes round Earth each day. Show the motion that explains both dots. Name one limit of the torch model.

My response
