

I am learning to use a named source to present careful facts about a genetic condition.

Words to use

Word	Meaning	Example	My language
inherited	passed to a child through genes	The card says cystic fibrosis is inherited.	
variant	a changed version of a gene	The card describes a changed CFTR variant.	
carrier	a person with one changed copy in this recessive example	A carrier usually does not have cystic fibrosis.	
source	where a claim comes from	The NHS page is the source for this card.	

Model

Simplified inheritance model: each parent carries one changed CFTR copy. The four grid squares are possibilities for each pregnancy, not a prediction for a person.

The NHS card says cystic fibrosis is inherited. Changed CFTR copies come from both parents. One changed copy usually means a carrier; two usually cause the condition. Name the NHS card with each claim.

Offline source card NHS card: Cystic fibrosis is inherited. It can affect breathing and digestion. Changed CFTR copies are inherited from both parents; one changed copy usually makes a carrier. Treatments can ease symptoms. The genetic cause is inherited; infection precautions are separate. This card predicts nothing about a person. Source: NHS, Cystic fibrosis; NHS Genomics Education Programme, Cystic fibrosis. Checked 24 September 2026.

How I know

I can name the condition and source.

I can explain CFTR inheritance without personal details.

I can tell a sourced fact from a guess.

You can plan in any language. Speak before you write: My source is ...; it supports ...; it does not tell us ...
