Pathway: BASE · Week 2 Part 2 · Big question: How do makers use layered card shapes to build bold relief art?

Core studio focus

Family: Studio suite

Big question: How do makers use layered card shapes to build bold relief art?

- Look at how a maker builds up flat card into raised shapes.
- Cut three simple beam or arch shapes from thick card.
- Glue your card shapes in layers to make a raised picture.

Essential vocabulary

- relief: Art where raised shapes stick up from a flat base.
- layer: One piece of card glued on top of another piece.
- base: The flat stiff board at the bottom of your work.
- maker: A person who plans and builds artwork by hand.
- join: Where two pieces of card meet and stick fast.

Three-step studio method

Step 1: Keep the base board flat: I lay my stiff base card flat on the mat. Do not cut it.

Step 2: Cut big base shapes first: I cut two wide card tall bars. Spread a thin coat of glue on the back.

Step 3: Add top cross bars: I glue narrower ridged strips across the tall bars to build a high layer.
