Teacher and cover plan — Makers, tools and visual links

Pathway: BASE · Week 2 Part 2 · Big question: How do makers use layered card shapes to build bold relief art?

Learning goals and studio kit

• Look at how a maker builds up flat card into raised shapes.

• Cut three simple beam or arch shapes from thick card.

• Glue your card shapes in layers to make a raised picture.

Studio kit: Thick greyboard bases, ridged card strips, smooth card offcuts, PVA glue spreaders, charcoal sticks

Arrival and starter

Arrival: Touch the sample card board on your table. How does it feel?

Starter question: What happens when you glue one card strip on top of another strip?

Teacher model (I do)

Step 1: Keep the base board flat: I lay my stiff base card flat on the mat. Do not cut it.

Step 2: Cut big base shapes first: I cut two wide card tall bars. Spread a thin coat of glue on the back.

Step 3: Add top cross bars: I glue narrower ridged strips across the tall bars to build a high layer.

Practice routes (Supported / Independent / Aspire)

Supported: Two layers of card strips glued firmly into a frame.

Independent: Three card levels cut, glued cleanly,. Bright lineed with wax.

Aspire: Three-layer relief panel with bolt details. Tonal bright line.

TA and cover notes

TA focus: Have pre-cut card strips in two widths ready in trays and supervise scissor use.

Staff prep: Staff preparation only: review a short clip on constructing a three-layer cardboard relief plate.
