TA studio brief — Try it once, then say what happened

Pathway: BASE · Week 4 Part 1 · Big question: What happens when we test sponge tapping and wax resist on our sign?

TA practical setup & focus

Give supported learners pale yellow wax crayons instead of white so they can see their lines as they draw. First adding blue wash.

Studio kit: Two-box studio test sheets, card cut shapes, small sponge sponges, thick paint trays, white wax crayons, dark water wash

Key words to prompt

• sponge: A soft tool with tiny holes that dabs dotty paint.

• resist: When wax pushes wet ink away so the wax lines stay bright.

• dab: To press a sponge straight up and down gently.

• test: To try a new art trick once to see how it works.

• note: A short short line saying what happened in your test.

Supported route steps

1. Hold a card cut shape on Box A. Dab around it with a sponge.

2. In box B, draw your shape firmly with a bright yellow wax crayon.

3. Brush thin blue wash right across Box B to see the yellow shine.

4. Tick the short line starter on your sheet to say which box looks clearest.

Check: Both boxes tested with one ticked review short line.

Review & exit support

Exit question: Why does wet water ink roll off a wax crayon mark?

Staff note: Staff preparation only: review a short clip demonstrating cut shape sponge tapping vs wax-resist wash.
