Staff answers & diagnostic guide — Test, check and adjust the panel

Pathway: BASE · Week 5 Part 2 · Big question: How can we test our relief panel layout and make one part stronger?

Starter answer & explanation

Question: Why is it smart to step back two paces. First you glue all your pieces down?

Correct: You can spot any piece that gets lost and move or brighten it easily — Yes. Testing. First gluing lets you adjust with zero mess.

Guided team check (We do) answers

Q1: What should you do if a dark card beam disappears against a dark base board? -> Back it with lighter card, add a foil strip, or dry-brush chrome on the ridges (Yes. Adding a light edge or chrome texture creates strong dark and light.)

Q2: Why do we only make ONE or TWO clear changes instead of starting all over again? -> A small smart change fixes the problem. At the same time keeping all your hard work (Yes. Makers adjust and improve; they do not throw good work away.)

Q3: Once you are happy with your adjusted layout, how do you glue the layers? -> Lift one piece at a time, spread thin glue on the back, and press for five seconds (Yes. Lifting one

piece at a time keeps your layout in place.)

Exit check answer

Question: When is the easiest time to move a card piece if it looks crooked?

Correct: During the dry layout check. First you put glue on it — Yes. Checking dry first lets you slide pieces into the best spot.
