TA studio brief — Test, check and adjust the panel

Pathway: BASE · Week 5 Part 2 · Big question: How can we test our relief panel layout and make one part stronger?

TA practical setup & focus

Mark a tape line on the floor two paces back from the display easel so pupils have a clear spot to stand for their step-back check.

Studio kit: Week 4 plan sheets, stiff dark base boards, ridged card, smooth card, pressed foil pieces, glue spreaders, white chalk/chrome pens

Key words to prompt

• test layout: Placing cut pieces on the board. First gluing to see how they look.

• adjust: To move or change one piece so the whole picture looks better.

• dark and light: Big difference between dark base card and bright chrome foil.

• overlap: When one card strip crosses right over the top of another.

• strong: Clear to see and firmly built.

Supported route steps

1. Lay your cut frame strips on your dark base board following your Week 4 plan.

2. Stand up. Look from two steps back with an adult.

3. Swap or add one shiny foil strip so the main beam stands out brightly.

4. Glue layer 1. Layer 2 firmly onto your base board.

Check: Layout checked from two steps back, foil dark. Light added, and main layers glued.

Review & exit support

Exit question: When is the easiest time to move a card piece if it looks crooked?

Staff note: Staff preparation only: review a short clip on running a two-pace dry-layout check. First bonding cardboard relief pieces.
