TA studio brief — Resolve and finish the relief artwork

Pathway: BASE · Week 6 Part 2 · Big question: How do we add top details and a neat border to finish our relief panel?

TA practical setup & focus

Pre-mark four small pencil corner ticks on the backing mount cards so pupils can centre their heavy relief boards easily.

Studio kit: Week 5 relief panels, Layer 3 card/foil details, hole-punch card bolt dots, chrome/rust dry-brush paint, white chalk pencils, backing mount cards

Key words to prompt

• resolve: To finish all last details so the artwork feels full.

• bright line: Bright chrome or white marks on the highest raised edges.

• bolt dot: A small round bolt dot glued on a beam corner.

• frame: A clean border card behind your panel that makes it look sharp.

• full: All layers stuck firm and ready for the wall.

Supported route steps

1. Glue four pre-punched card bolt dots onto the corners of your beams.

2. Sweep a dry chrome brush lightly across your raised card. Bolt dots.

3. Line your panel up with the four guide marks on your backing frame. Press down.

4. Write your first name neatly on the back sticker.

Check: Bolt dots added, chrome bright lines skimmed,. Panel mounted straight.

Review & exit support

Exit question: Why do we add bright chrome or white chalk to the highest bumps last?

Staff note: Staff preparation only: review a short clip on applying two-stage dry-brush bright lines and mounting heavy relief boards.
