Teacher and cover plan — Resolve and finish the relief artwork

Pathway: BASE · Week 6 Part 2 · Big question: How do we add top details and a neat border to finish our relief panel?

Learning goals and studio kit

• Glue down your final top details (Layer 3 cross-bars. Bolt dots).

• Add chrome or chalk bright lines across the highest bumps.

• Frame your finished panel on a clean backing card.

Studio kit: Week 5 relief panels, Layer 3 card/foil details, hole-punch card bolt dots, chrome/rust dry-brush paint, white chalk pencils, backing mount cards

Arrival and starter

Arrival: Touch the corners of your Week 5 panel. Are all the main beams stuck down tight?

Starter question: Why do we wait until the very end to skim chrome bright lines over our raised card?

Teacher model (I do)

Step 1: Check and add Layer 3 bolt dots: I glue four small round card bolt dots onto the corners where my arch meets the tall bars.

Step 2: Skim bright lines on top edges: I drag a dry chrome brush lightly across the bolt dots. Ridges so they catch the light.

Step 3: Centre on the backing frame: I glue the back of my stiff panel onto a slightly larger black mount card for a neat border.

Practice routes (Supported / Independent / Aspire)

Supported: Bolt dots added, chrome bright lines skimmed,. Panel mounted straight.

Independent: Three-layer relief panel fully resolved with two-tone shiny metal finish. Frame.

Aspire: Resolved relief panel with deep joint shadows, crisp bright lines, mount,. Title slip.

TA and cover notes

TA focus: Pre-mark four small pencil corner ticks on the backing mount cards so pupils can centre their heavy relief boards easily.

Staff prep: Staff preparation only: review a short clip on applying two-stage dry-brush bright lines and mounting heavy relief boards.
