Knowledge organiser (TRACK) — Creative practitioners and studio roles

Pathway: TRACK · Week 5 Part 2 · Big question: How do sculptors, printmakers, and exhibition designers turn raw materials into public artworks?

Core studio focus

Family: Studio suite

Big question: How do sculptors, printmakers, and exhibition designers turn raw materials into public artworks?

• Investigate three studio roles: structural sculptor, relief printmaker, and exhibition designer.

• Analyse how practitioners move from site brief and maquette to full-scale fabrication.

• Create a visual practitioner study page linking one studio role to your own relief panel.

Essential vocabulary

• practitioner: A skilled creative maker who works with specialist studio methods.

• maquette: A small-scale 3D test model built to check form and balance before making a big sculpture.

• fabrication: Building and joining the full-size artwork in a workshop or foundry.

• commission: A formal brief asking a maker to design an artwork for a specific place.

• scale model: A miniature version built in exact proportion to the real space.

Three-step studio method

Step 1: Compare the three studio roles: I read the role profiles for Structural sculptor, Collagraph printmaker, and Exhibition designer and highlight their core tools.

Step 2: Create a visual response study: On my practitioner sheet, I construct a small layered card-and-line study showing how a maquette tests shadow and scale.

Step 3: Link practitioner methods to my own work: I write three clear bullet points explaining how my relief panel uses maquette layering and surface patina.
