Tier pack: Supported route — Creative practice, studio roles and pathways

Pathway: SUMMIT · Week 2 Part 2 · Big question: How do interdisciplinary creative groups take a structural commission from studio prototype to public installation?

Supported route studio steps

Step 1: Complete the four-role studio map linking Designer, Engineer, Fabricator, and Curator.

Step 2: Construct a strong corner joint using two laminated card beams, a triangle gusset plate, and a foil rivet strip.

Step 3: Mount your corner prototype onto the centre of your sheet and label the materials used.

Step 4: Tick which of the four studio roles matches your strongest skill.

Success check

Workflow map completed, corner-joint prototype mounted, and personal role strength identified.

Key words helper

• interdisciplinary: Different specialists (artists, engineers, fabricators, curators) working together on one project.

• prototype: A working test section built at real or scaled size to prove a joint or surface finish works.

• specification: A precise technical instruction naming materials, dimensions, and surface treatments.

Review checklist

[ ] Test your mounted corner prototype gently with your finger to verify the gusset joint is rigid and flat.

[ ] Check that your Fabrication specification lists materials, joinery, and patina steps clearly.

[ ] Add your Studio practice & Pathways board to your portfolio.
