Knowledge organiser (SUMMIT) — Designing a peer studio workshop project

Pathway: SUMMIT · Week 5 Part 2 · Big question: How do we design a structured, safe, and inspiring practical workshop to lead our peers in building a relief study?

Core studio focus

Family: Studio suite

Big question: How do we design a structured, safe, and inspiring practical workshop to lead our peers in building a relief study?

• Design a 15-minute tabletop studio workshop teaching a specific structural relief or surface patina method.

• Produce a complete Workshop leadership Pack: Step-by-Step visual Exemplar board, Material prep List, and Safety risk Check.

• Build the three physical stage exemplars (Raw blank, Mid-Process, Resolved tile) that participants will follow.

Essential vocabulary

• workshop brief: A structured teaching plan that guides participants to make a finished study in a set time.

• scaffolding: Breaking a complex studio technique into manageable, foolproof stages with visual models.

• risk assessment: Identifying practical hazards (cutting edges, foil corners, spills) and putting safe controls in place.

• contingency: A smart backup plan if a material runs low or a participant's piece lifts.

• facilitation: Guiding and coaching peers calmly so they succeed with their own hands.

Three-step studio method

Step 1: Define the 15-minute workshop focus and timing: I choose 'Laminated truss Joint with Ink-Wipe foil Gusset' and map the 2-10-3 minute timing on my Leadership board.

Step 2: Fabricate and mount the 3 Stage Exemplars: I build and mount Tile 1 (Laminated beams), Tile 2 (Embossed foil gusset attached), and Tile 3 (Dark wash wiped to reveal high ridges).

Step 3: Complete the Kit list and Risk assessment: I list the exact blank sizes needed for four participants and write the safety controls for foil edges and glue spreaders.
