TA studio brief — Piloting, leading and adapting the studio session

Pathway: SUMMIT · Week 6 Part 2 · Big question: How do we run a live pilot of our workshop sequence, spot material bottlenecks, and adapt our instructions?

TA practical setup & focus

Run an 8-minute timer for Pilot round 1 and an 8-minute timer for Pilot round 2 so both partners get equal time leading and testing.

Studio kit: Week 5 Workshop leadership Boards, prepped participant blank wallets, foil/card/wash trays, studio timers, Pilot adaptation log cards

Key words to prompt

• pilot test: A live trial run of a workshop with a small group used to spot and fix problems before the main event.

• bottleneck: A step where participants get stuck, wait for a tool, or take longer than planned.

• iteration: Testing a plan, observing what happens, and making a targeted improvement.

• pacing: Managing the time spent on each step so participants finish a resolved piece before time runs out.

• visual cue: A bold arrow, colour code, or stage sample that clarifies an instruction instantly.

Supported route steps

1. Use your 3-tile board to guide your partner through making one sample tile.

2. Swap roles and make a tile at your partner's station.

3. Add one bold tip sticker to your Workshop board to make the hardest step clearer.

4. Glue the tile your partner made onto your Pilot log sheet and tick what you improved.

Check: Partner pilot completed, one upgrade added to board, and peer tile mounted on log.

Review & exit support

Exit question: Why do we mount the sample tile our partner made during the pilot onto our studio log sheet?

Staff note: Staff preparation only: review how to run a paired 8-minute workshop pilot and guide pupils to log concrete instructional adaptations.
