Tier pack: Independent route — Piloting, leading and adapting the studio session

Pathway: SUMMIT · Week 6 Part 2 · Big question: How do we run a live pilot of our workshop sequence, spot material bottlenecks, and adapt our instructions?

Independent route studio steps

Step 1: Facilitate an 8-minute live pilot of your workshop with a peer, testing your safety briefing, 3-stage exemplars, and time plan.

Step 2: Participate in your partner's pilot and exchange structured diagnostic feedback on pacing and clarity.

Step 3: Modify your Workshop leadership Board and participant prep kit to solve one identified bottleneck.

Step 4: Mount the peer-made pilot tile onto your Pilot adaptation Log with a three-part reflection (Observation -> Bottleneck -> Adaptation).

Success check

Timed pilot delivered, board/kit adapted, and peer tile mounted with 3-part reflection.

Key words helper

• pilot test: A live trial run of a workshop with a small group used to spot and fix problems before the main event.

• bottleneck: A step where participants get stuck, wait for a tool, or take longer than planned.

• iteration: Testing a plan, observing what happens, and making a targeted improvement.

• pacing: Managing the time spent on each step so participants finish a resolved piece before time runs out.

• visual cue: A bold arrow, colour code, or stage sample that clarifies an instruction instantly.

Review checklist

[ ] Verify that your partner's pilot tile is mounted on your Pilot log sheet alongside your adaptation note.

[ ] Restock your participant wallet with fresh blanks so your tray is ready for Week 7.

[ ] Check that your upgraded visual cue is bold and legible on your Workshop board.
