Muscle Pairs · TA Brief

Learning goal: I can find a pair of arm muscles and show which muscle pulls to bend or make the arm straight.

Watch (staff preview first)

Short silent teacher demonstration clip for this lesson's model and practical sequence · preview before class use.

Adult Support Routine

No cold calling; nobody is asked to read difficult text aloud.

Give time to start -> point to the relevant place -> rephrase -> offer a small prompt or word bank -> reduce to a limited choice.

Beside the You do in the pupil book, mark I (independent), S (supported) or C (choice).

Must-Know Words

muscle: a body part that pulls on a bone to make it move

joint: a place where two bones meet and bend

pull: when a muscle gets short and tight to move a bone

relax: when a muscle goes soft and long

Key Answers

A. Muscles only pull, so we need a pair to pull the

bone each way.

A. The top muscle pulls the lower arm bone up while the back muscle rests.

1. Top muscle. 2. It relaxes (goes soft and long). 3. Because muscles can only pull and never push.
